MOL1

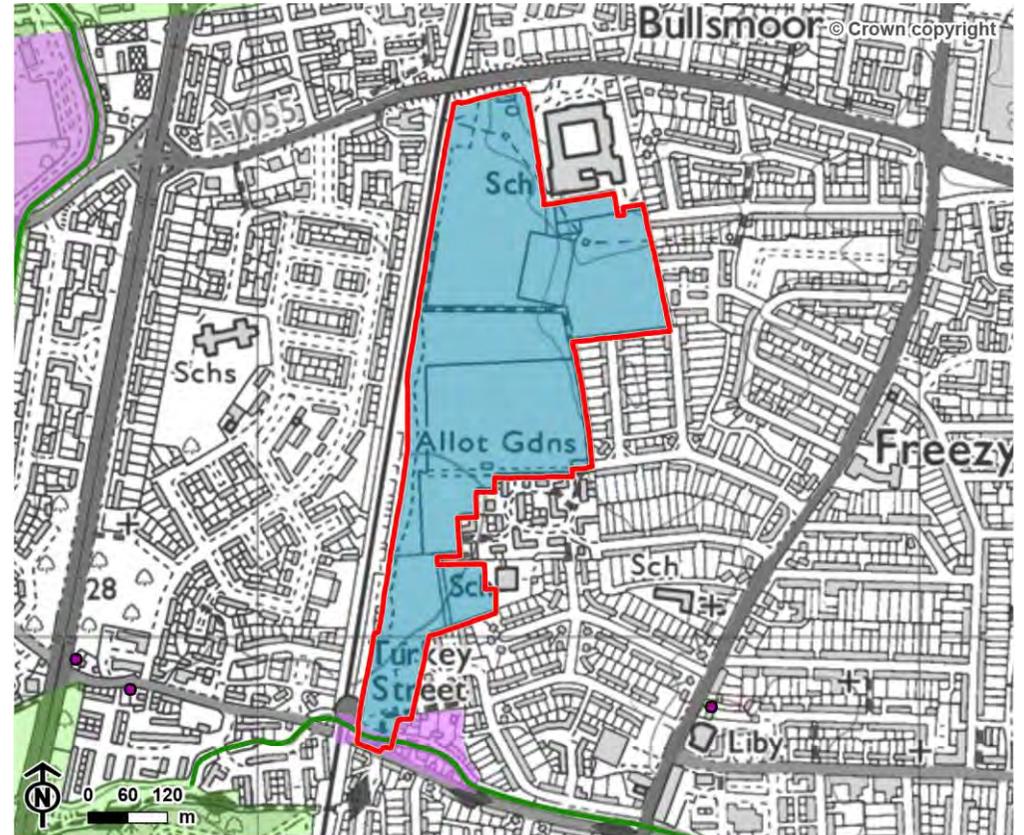

19.18ha

- MOL1
- MOL
- Green Belt

Parcel location

The MOL lies near the northern edge of the Borough. It is formed of Belmore Fields open space, playing fields associated with the Lee Valley Academy, a play area, Aylands Allotments and other accessible open space. A small school building associated with Aylands School is located in the south eastern corner of the MOL. Turkey Street Conservation Area

- MOL1
- MOL
- Green Belt
- Green chain corridor
- Listed building
- Conservation area
- Metropolitan Site of Importance for Nature Conservation

overlaps with the southern tip of the MOL.

MOL1

19.18ha

Contribution to MOL criteria

Openness

Land is relatively open but has some limiting urbanising development within it, in the form of a small school building associated with Aylands School.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The railway tracks and treelines to the west and the road to the north of the playing fields offer some distinction between the MOL and the built-up area, though the patchy tree line to the east offers less distinction between the MOL and Lee Valley High School. Just to the south, the treeline and residential gardens create some distinction between the allotments and the residential area. As the development surrounding the MOL is relatively modest the treelines largely screen views of the built-up area, though less so to the east where the trees / bushes are patchy, allowing views through. Consequently these areas are considered to have moderate distinction from the built up area.

The playing fields associated with Lee Valley High School are considered to have weak distinction from the built-up area. This is because of the lack of boundary features to the north, with the school and a weak boundary to the east and the residential houses. This, coupled with the landform allows views of the built up area from all parts of this section of MOL. Furthermore, the treelines to the west limit views of the wider MOL. Similarly the land to the south of the allotments lacks any significant boundary features with the built-up area to the east and west and the narrowness of the MOL increases the influence of the views of the urban area. A school building associated with Aylands School is located just to the east, and this building is considered to compromise the openness of the land upon which it sits and that immediately adjacent, although the treeline just to the west of the building limits its impact on the wider MOL.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The southern end of the MOL is located within and visually connected to the Turkey Brook Conservation Area up to the first treeline within the MOL beyond which views are screened. The Turkey Brook Conservation Area Appraisal notes the area's well defined character focussed on Turkey Brook and the best views of the Conservation Area are from the western end. The same portion of the MOL is functionally linked to the London Loop walking route (part of the TFL walk London Network) which enjoys open views of the same section of MOL looking north from Whinington Lane before the route moves right along Turkey Street. This portion of the MOL therefore considered to make a strong contribution to this criterion.

The rest of the MOL accessible to the general public directly beyond the first treeline in the southern portion of the MOL is considered to make a moderate contribution to this criterion by virtue of the fact that walkers along the London Loop have easy access to these facilities within the MOL.

The remaining areas of MOL located in Aylands Open Space, notably the allotments and school playing fields, are not considered to be functionally linked to either the Conservation Area or London Loop, or any other designation of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Turkey Brook Link. Consequently, the area of the MOL that makes a strong contribution to Criterion 3 makes a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been

MOL1

19.18ha

downgraded against this criterion.

The MOL is connected to the Turkey Brook Link. Consequently, the area of the MOL that makes a moderate contribution to Criteria 1 and 3 make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Turkey Brook Link. There are however areas within the MOL that make a weak/no contribution to the other three MOL criteria. Consequently, these areas of the MOL also make a weak/no contribution to this criterion.

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL1

19.18ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The southern end of the MOL makes a strong contribution criteria 3 and 4. Release in this area would breach what remains of the distinct boundaries formed by Teal Close to the west and Turkey Street/Turkey Brook; however the area and the land to the north and north east already has weak distinction from the built-up area. Release in this area would therefore result in high MOL harm.

The northern area of the MOL makes a moderate contribution to criteria 1, 3 and 4. Release in this area would breach the distinct boundaries formed by the railway line to the west and Bullsmoor Lane to the north, although the MOL to the east and south are generally less distinct and screened from view meaning that its release would not affect the contribution of adjacent MOL to criteria 1. The land immediately to the north of the area of strong contribution makes a moderate contribution to criteria 3 and 4. The area's relatively weak distinction from the built-up area means its release would not affect the contribution of adjacent MOL to criteria 1; however, release in this area would break the functional link this area provides to the wider pocket of MOL, reducing the contribution of the publicly accessible land to the north from moderate to weak/no contribution for criteria 3. Release in these areas would therefore result in moderate-high MOL harm.

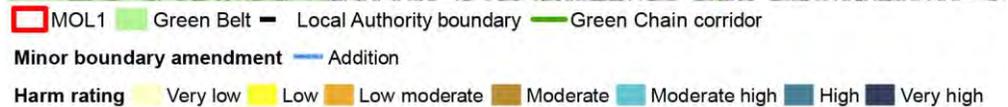

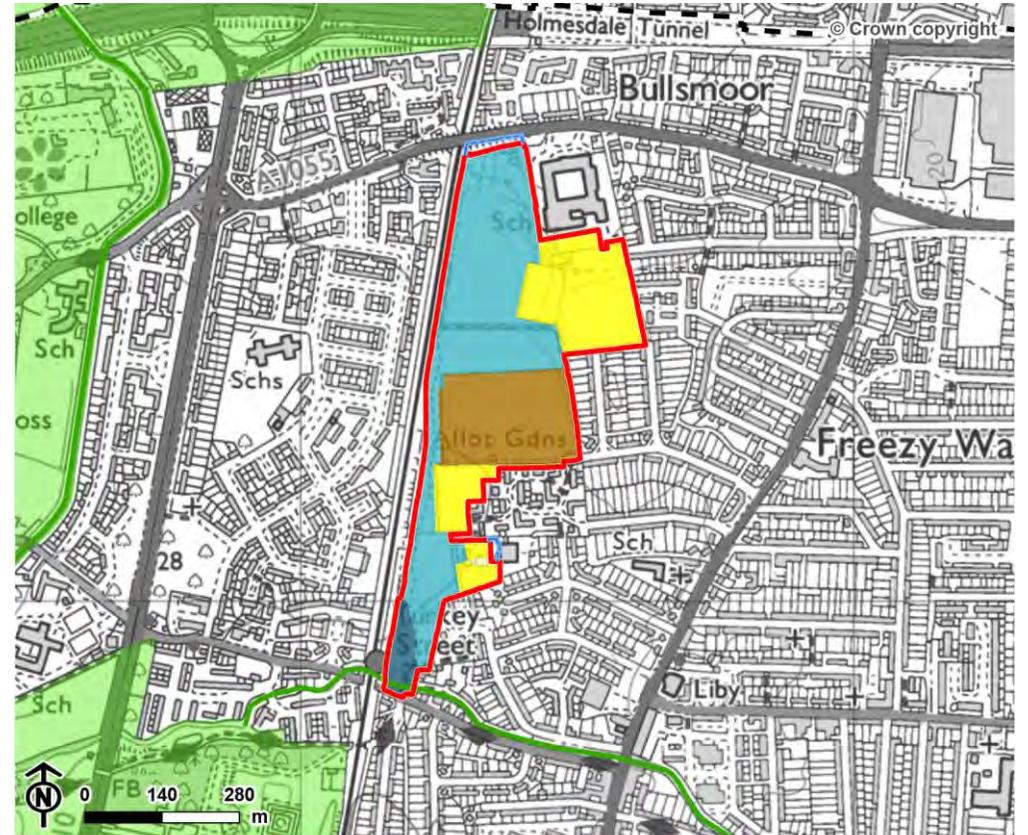

The majority of the area of allotments in the central portion of the MOL makes a moderate contribution to criteria 1. The mature tree-lined boundaries to the north and west are relatively strong compared to the existing weak boundaries with the built-up area to the south and east. Therefore, its release is not considered to affect the contribution of adjacent MOL to criteria 1. Release in this area would therefore result in moderate MOL harm.

The land that makes a weak/no contribution to all four MOL criteria could all be released without affecting the distinction or functionality of adjacent MOL. However, with the exception of the building in the southernmost area of weak contributing MOL this land is fundamentally open. Release in these areas would therefore result in low MOL harm.

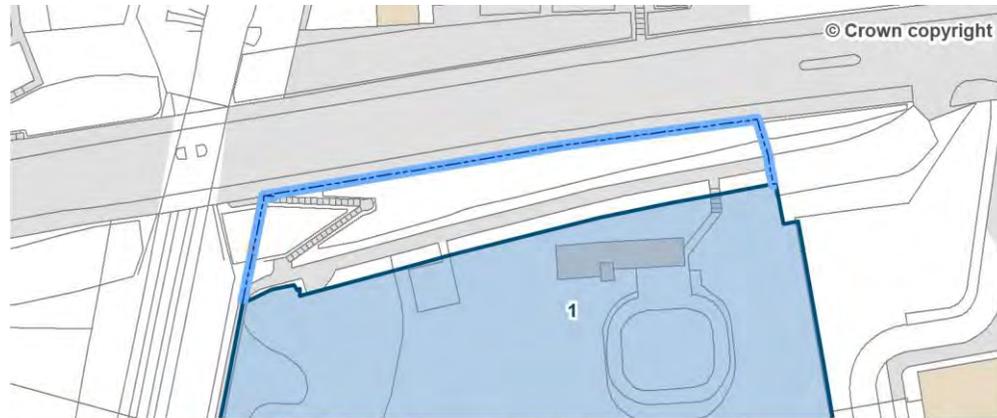

Release of the building in the southernmost area of weak contributing MOL is directly adjacent to the built-up area and is therefore indistinguishable from it. Release of this area would therefore result in no/very low harm.

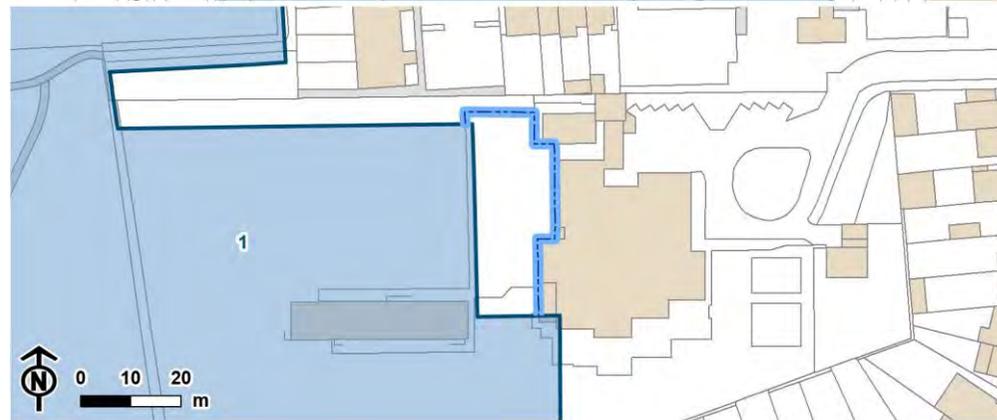

MOL1

19.18ha

Potential minor boundary adjustment recommendations

Extend MOL to the road to the north which provides a recognisable boundary.

Extend MOL to include school playground immediate adjacent to open playing fields, with buildings providing a recognisable boundary.

Green line: Green chain corridor

MOL.

MOL2

19.07ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of an adult day care centre, New Options.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The railway tracks to the east of the playing fields, the roads to the north and south and the Turkey Brook to the north provide strong boundaries between the MOL and the built-up area. The patchy treeline and residential gardens to the north provide some visual distinction. While the boundaries to the north and south of the playing fields, and the landform allows views of the built-up area, the impact of this is limited by the size of the MOL, which affords extensive views of the open area.

The eastern half of the MOL containing play areas, playing fields and small areas of open space, has weak distinction from the built-up area. This is due to a lack of boundary features, particularly to the south and west where there is no discernable boundary with the built up area and the scale of the built up area, including high rise residential blocks and the Ark John Keats Academy, which dominate this narrow area of MOL. A small building is located on the western edge of the MOL, compromising the openness of the MOL upon which it sits and the land in the immediate vicinity.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The London Loop walking route (part of the TFL walk London Network) follows the Turkey Brook which flows along the northern edge of the MOL. The walk enjoys open views of most of the playing fields and the playing ground in Albany Park. Therefore, the majority of the MOL is considered to make a strong contribution to this criterion.

The outdoor facilities to the north and west of Ark John Keats Academy are not visible from the London Loop walking route but they are readily accessible. Therefore, these portions of the MOL are considered to make a moderate contribution to this criterion.

The outdoor facilities to the south of the playground largely associated with Ark John Keats Academy are not easily viewed or readily accessible from the London Loop walking route. Therefore, these portions of the MOL are considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Turkey Brook Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1 and 3 make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Turkey Brook Link. Consequently, the area of the MOL that makes a moderate contribution to Criteria 3 also makes a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL2

19.07ha

The MOL is connected to the Turkey Brook Link. There is however an area within the MOL that makes a weak/no contribution to the other three criteria. Consequently, this area of the MOL also makes a weak/no contribution to this criterion.

Weak/No contribution

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL2

19.07ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

Albany Park makes a strong contribution criteria 1, 3 and 4. Release in this area would breach the distinct boundaries formed by the railway line, Turkey Brook and Bell Lane. Release in this area would therefore result in very high MOL harm.

The western area of the MOL north and west of the Ark John Keats Academy makes a moderate contribution to criteria 3 and 4. The area's relatively weak distinction from the built-up area and screened from view of the wider MOL means its release would not affect the contribution of adjacent MOL to criteria 1. Release in this area would therefore result in moderate MOL harm.

The building adjacent to Albany Leisure centre at the western end of the MOL is directly adjacent to the built-up area and is therefore indistinguishable from it. Release of this area would therefore result in low-moderate harm.

The land that makes a weak/no contribution to all four MOL criteria could all be released without affecting the distinction or functionality of adjacent MOL. However, with the exception of the edges of the school buildings this land is fundamentally open. Release in these areas would therefore result in low MOL harm.

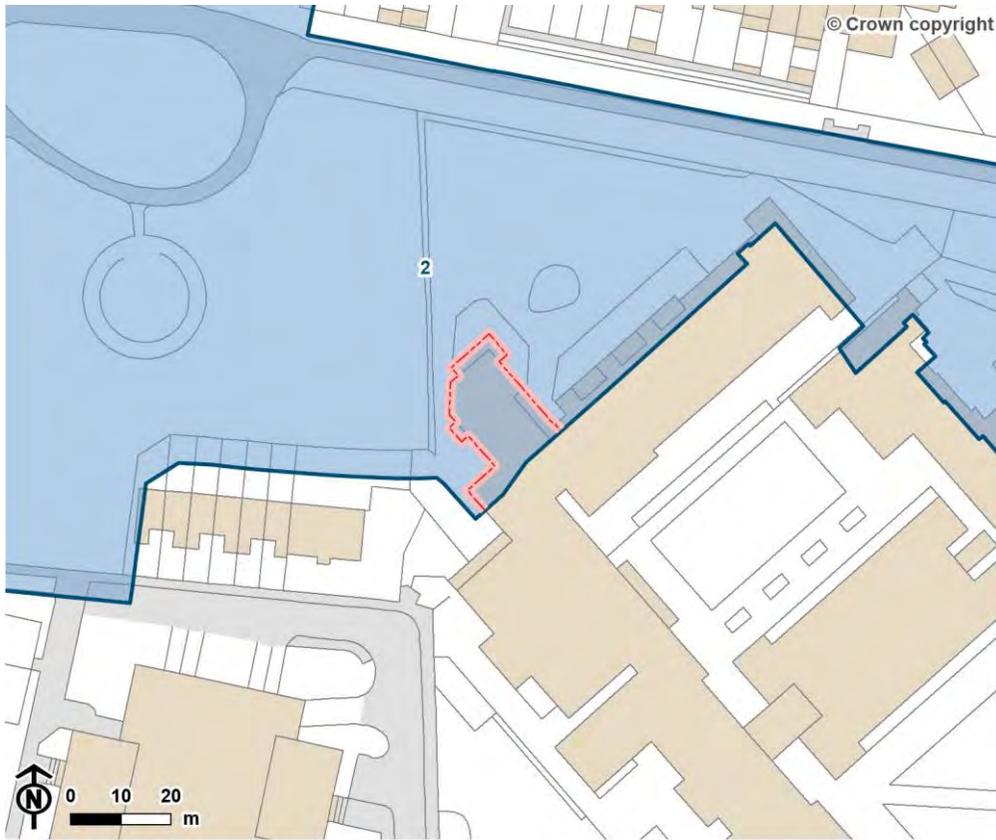

MOL2

19.07ha

Potential minor boundary adjustment recommendations

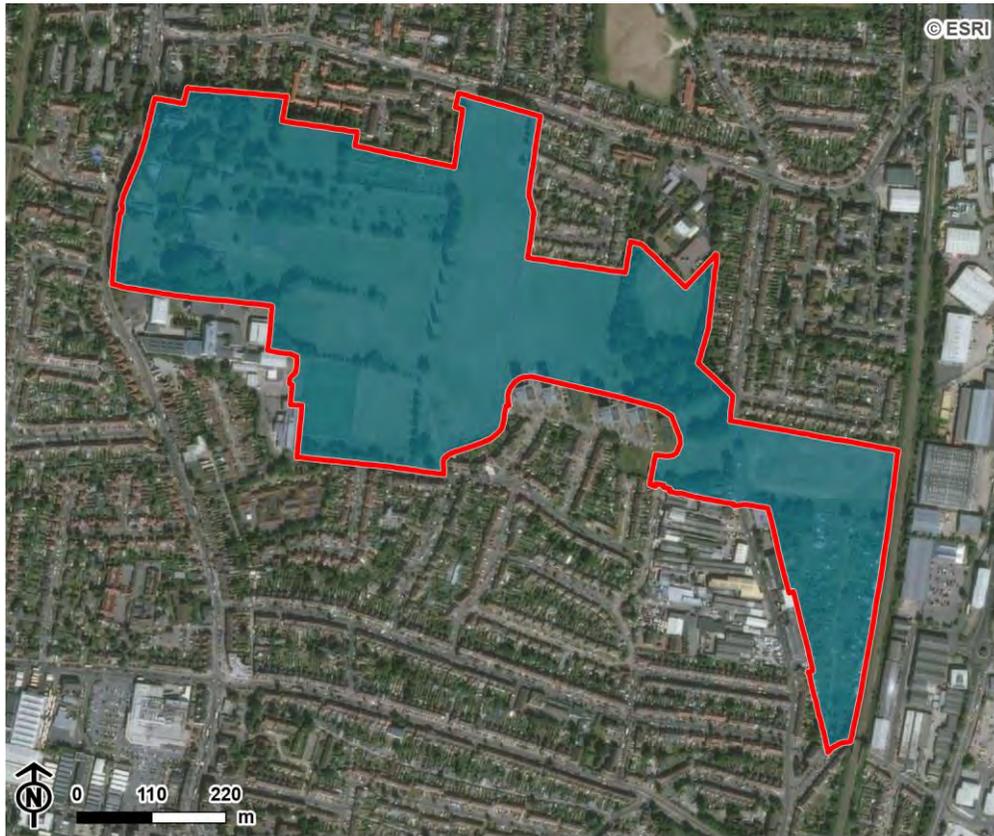

Remove the area of MOL which overlaps the school building.

MOL3

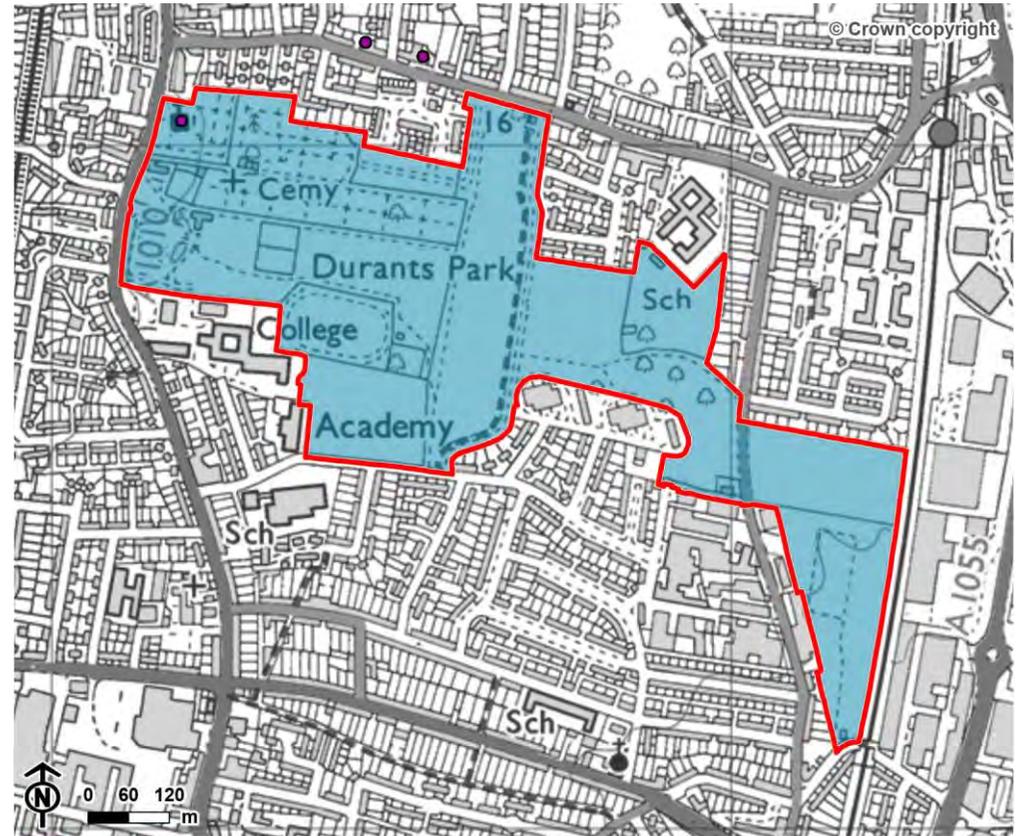

36.34ha

■ MOL3
■ MOL

Parcel location

The MOL is located to the east of the Borough in Enfield Highway. It consists of Durants Park (which includes a bowling green, tennis courts and a play area), Hertford Road Cemetery and the Parish Church of St James, Alma Road Allotments, playing pitches associated with Waverley School and Brimsdown Primary School. A scout building is located on the southern

■ MOL3 ■ MOL
● Listed building

edge of the MOL.

MOL3

36.34ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of The Parish Church of St James and a Scout Hut, The 28th Enfield Scout Group.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The blocks of woodland surrounding St James Church in the north western corner and separating Brimsdown Primary School from the wider MOL offer strong distinction from the built-up area. The westernmost third of the MOL, covering two thirds of Durants Park contains more mature tree cover than the rest of the MOL to the east, particularly along the boundaries of the MOL, maintaining a strong sense distinction.

St James Church lies adjacent to the built-up area in the north western corner of the MOL, compromising the openness of the MOL in this location. The mature trees and cemetery surrounding the church serve to maintain some distinction between the Church grounds and the built-up area. Therefore, overall, the church is considered to have moderate influence on the distinction of the MOL in this location from the built-up area. The open playing fields of Brimsdown Primary School are separated from the wider MOL by a block of woodland, although the scale of the primary school buildings to the north are relatively modest and mature trees largely screen views of the school and the adjacent built-up area to the east, maintaining some sense of distinction in this location. Consequently, both of these locations are considered to have moderate distinction from the built-up area.

The remaining land within the MOL is considered to have weak distinction from the built-up area due to the scale of development at the built-up edge and a general lack of any significant boundary features marking a distinction between the MOL and the built-up area. This includes the open land in between the residential estates to the north and south of the MOL (notably the estates along Exeter Road and Burncroft Avenue), the open land in between the Essex Road estate and Avondale Crescent to the east, the open playing fields of Waverly School to the south west and the allotments sandwiched between Brimsdown industrial estates in the south eastern corner of the MOL. A scout building is located within the MOL to the west of Alma Road directly adjacent to the built-up area. This building is considered to compromise the openness of the MOL upon which it sits and in its immediate vicinity, although its influence on the openness of the wider MOL is limited by the road to the east and the mature trees to the north and west.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The Church of St James in the north west corner of the MOL is a Grade II listed building. Its listing makes no reference to its setting within the MOL. Consequently, the strong contribution of the MOL to this asset is restricted to its immediate vicinity.

The remaining areas of MOL are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node

MOL3

36.34ha

or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL3

36.34ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The westernmost third of the MOL, covering two thirds of Durants Park, St James Church and the woodland south of Brimsdown Primary School make a strong contribution to either criterion 1 or 3. Release in the woodland would split the MOL in two and reduce the distinction of the playing fields to the north from moderate to weak. Release in the western third of the MOL would breach the distinct boundary of Hertford Road. The open cemetery within the immediate setting of the listed St James Church makes a strong contribution to criteria 1 and 3, although the loss of openness where the church sits and the mature woodland in this area would limit the impact of release on the distinction of adjacent MOL to the east and south. Release of these areas would therefore result in high MOL harm.

Brimsdown Primary School playing fields makes a moderate contribution to criteria 1, although the mature tree-lined boundaries to the south and west are relatively strong compared to the existing weaker boundaries with the built-up area to the south and east. Therefore, its release is not considered to affect the contribution of adjacent MOL to criteria 1. Release in this area would therefore result in moderate MOL harm.

The land in between Exeter Road to the west and Alama Road to the east and north of the tower blocks on Exeter Road make a weak/no contribution to all criteria. A lack of any existing distinct boundary features in these locations means any release is unlikely to effect the contribution of adjacent MOL to criteria 1, with the exception of the western edge of the central north of Exeter Road. Release in this location would bring the built-up area closer to the heart of the MOL with strong distinction to the west, lowering the distinction MOL in direct view of the new urban edge from strong to moderate. Release in either location would split the MOL in two. Release in these areas would therefore result in low-moderate MOL harm.

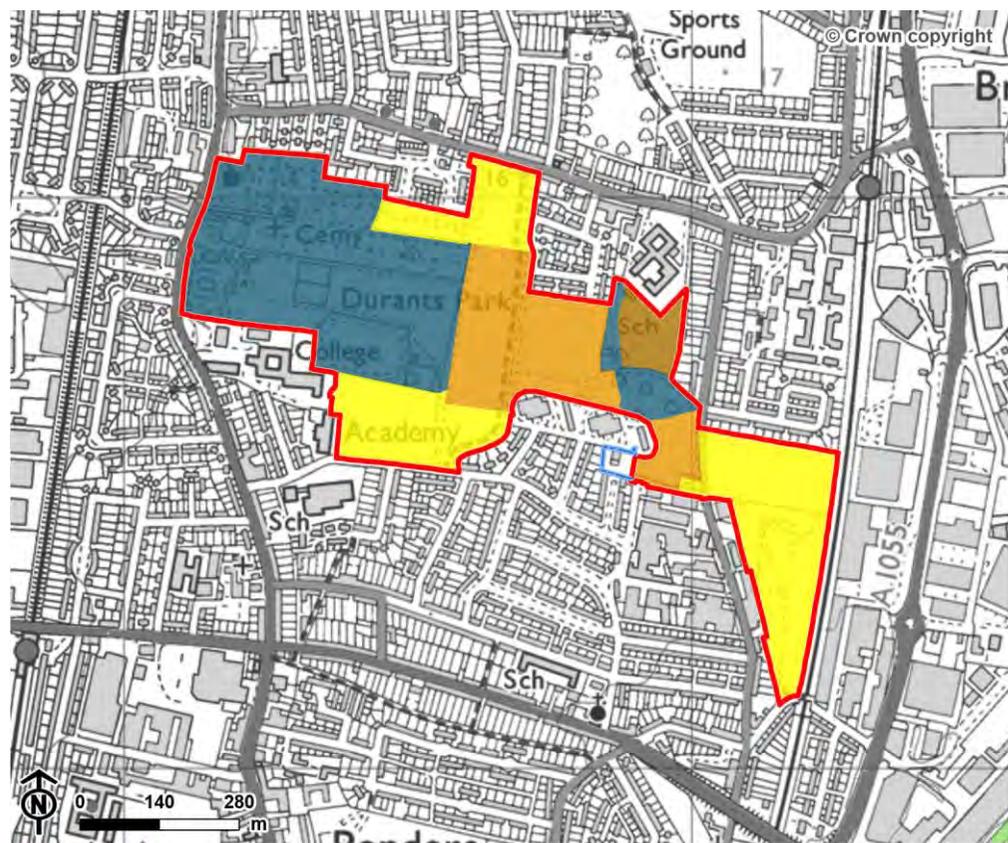

The land to the east of Alma Road, the land immediately to the north of The Ride Road in between the Exeter Road Estate and Kingfisher Hall Primary Academy, the land immediately south of Green Street and west of Ambleside Crescent and the allotments off Burncroft Avenue make a weak/no contribution to all four MOL criteria and could be released without affecting the distinction or functionality of adjacent MOL, due to the existing strong influences of the built-up area and the partial screening provided by their outer boundaries in the MOL. Although the release of these areas would result in the loss of the roads and railway line that partially separate these areas from parts of the built-up area, the visual dominance of the built-up area limits the value of this. Release in these area would therefore result in low MOL harm. Release in these areas would therefore result in low MOL harm. All the locations are fundamentally open, with the exception of the scout building to the west of Alma Road. The loss of openness in this location reduces the harm of release on the site of the building from low-moderate in the surrounding area west of Alma Road to low.

- Metropolitan Site of Importance for Nature Conservation

the MOL respectively.

MOL4

48.96ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of George Spicer Primary School and Ellenborough Table Tennis Club.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The main road to the east provides strong distinction from the built-up area. The treelines and residential gardens to the south and west provide some distinction from the built-up area, although the breaks in the trees offer short range views of urban development, however the wide ranging views of the open area mitigate the influence of the urban area.

The allotments at the northern tip of the MOL, those in the south western corner of the MOL, and the area of open space adjacent to residential dwellings along Cobham Close at the southern end of the MOL, all have more of a relationship with the built-up area. In these locations there is a general lack of significant boundary features providing distinction from the built-up area and vegetation within the MOL limits views of the wider MOL to some degree.

The very south western tip of the MOL containing buildings associated with George Spicer School has weak distinction from the built-up area. The buildings reduce the openness of the land upon which they are located and that in the immediate vicinity. The tree cover along the edge of the allotments just to the east restricts views of the open area. Similarly the sports pitches associated with Kingsmead School in the south eastern corner of the MOL also have weak distinction from the built-up area. There are no boundaries between the sports pitches and the school, which also partially contains the area from the west.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The Queen Elizabeth Stadium Football Grounds in the north of the MOL is a Grade II listed building. Its listing makes no reference to its setting within the MOL. Consequently, the strong contribution of the MOL to this asset is restricted to its immediate vicinity.

The remaining areas of MOL are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is within close proximity to the New River and Enfield Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1 and 3 make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is within close proximity to the New River and Enfield Link. Consequently, the areas of the MOL that make a moderate contribution to Criterion 1 make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL4

48.96ha

The MOL is within close proximity to the New River and Enfield Link. There are however areas within the MOL that make a weak/no contribution to the other three MOL criteria. Consequently, these areas of the MOL also make a weak/no contribution to this criterion.

Weak/No contribution

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL4

48.96ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The area containing the historic Queen Elizabeth Stadium at the north end of the MOL makes a strong contribution to criteria 1, 3 and 4. Release of Stadium area (and the land to the north which would be isolated) is therefore likely to generate higher harm than the rest of the area contributing strongly to criteria 1 and 4, although the woodland to the south and access road to the stadium maintain a sense of distinction that would limit impact on the distinction of adjacent MOL to the south if this area were released in isolation. Overall, release in this area would result in very high MOL harm.

The majority of the MOL just makes a strong contribution to criteria 1 and 4. Release in this area would therefore result in high MOL harm.

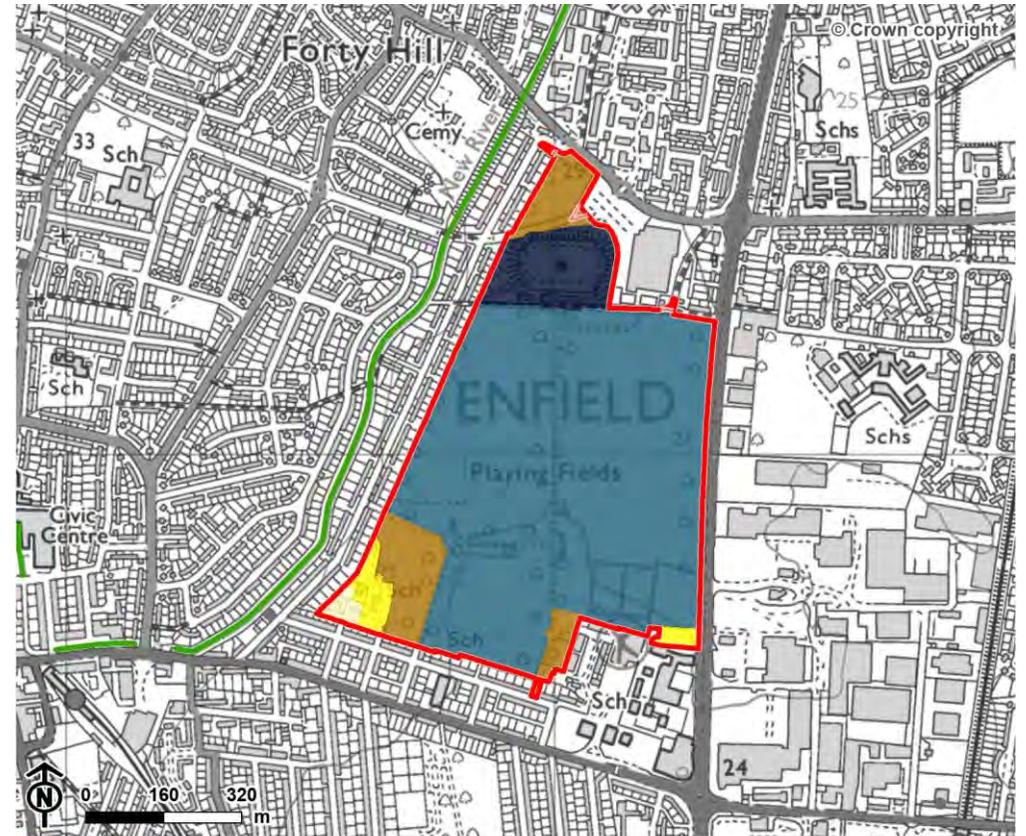

The allotments at the northern tip and south western corner of the MOL and the area of open space adjacent to residential dwellings along Cobham Close at the southern end of the MOL make a moderate contribution to criteria 1 and 4. These areas are largely screened from the wider MOL by mature tree cover which represent boundaries of equal strength to the existing boundaries with the built-up area. Therefore, their release is not considered to affect the contribution of adjacent MOL to criteria 1. Release in these areas would therefore result in moderate MOL harm.

The south western corner of the MOL adjacent to the main buildings associated with George Spicer School and containing its outdoor sports and playing pitches and the open play area associated with Kingsmead School in the south eastern corner make a weak/no contribution to all MOL criteria. Although these areas are fundamentally open, they could be released without affecting the distinction or functionality of adjacent MOL. Release in these areas would therefore result in low MOL harm.

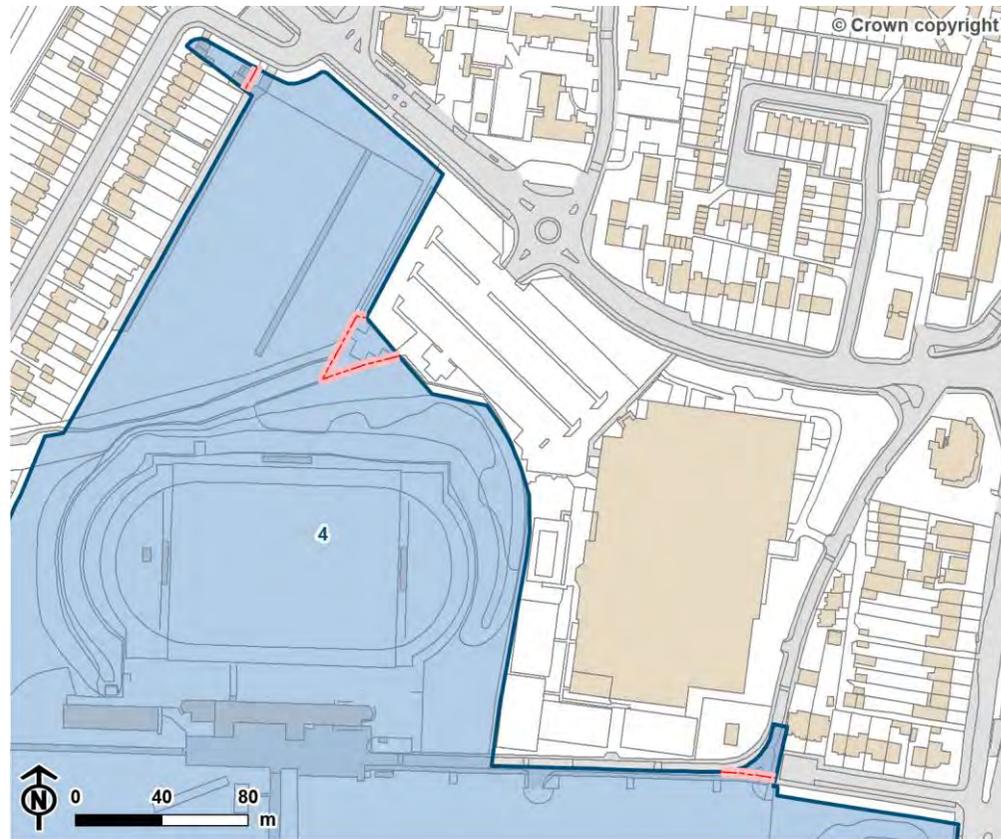

The very south western corner of the MOL containing buildings associated with George Spicer School is directly adjacent to the built-up area and is therefore indistinguishable from it. Release of this area would therefore result in no/very low harm.

MOL4

48.96ha

Potential minor boundary adjustment recommendations

□ MOL parcel

■ MOL

Minor boundary amendment - - - Removal

Remove the MOL to the north west where it overlaps a residential building and associated property contiguous with the large built-up area, and in the centre where it cuts across the car park. The tree edges form a more recognisable boundary.

Remove the area of MOL which consists of the road sandwiched between residential properties.

through the MOL.

MOL5

10.36ha

Contribution to MOL criteria

Openness

Land is relatively open but has some limited urbanising development within it, in the form of St Andrew's Church.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The north western portion of the MOL has strong distinction from the urban edge due to strong boundaries formed by a treeline and the New River to the north and west and thick treelines to the car park in the centre. These boundaries also effectively screen most views of the built-up area.

The wooded area in the southern tip of the MOL just north of St Andrews Church, the open space along the south western edge alongside Pennyfather Lane and the playing fields on the eastern edge of the MOL abutting Baker Street have a more moderate distinction from the built-up area. While these areas have some boundaries which provide distinction from the built-up area and screen views they also have areas where a lack of boundary features means that there are views of the urban edge. In each case there are also treelines within the MOL which limit views of the wider open area in at least one direction. With regards to the wooded area to the south of the MOL, while the tree cover increases distinction the scale of development from the church to the south and the schools to the east limits this to some degree. Furthermore, this wooded area has visual relationship with the wider MOL.

St Andrews Church at the southern tip of the MOL has weak distinction. The building compromises the openness of the land upon which it sits, though its impact on the wider MOL is limited by the trees to the north. The playing fields to the north of Enfield County School and to the west of Silver Street are also considered to have weak distinction from the built-up area. This is due to a lack of boundary features with the schools, the scale of which dominate this thin area of MOL, coupled with the treeline to the west which limits views of the wider MOL. The small square of open space in the north eastern corner of the MOL, just south of development off Parsonage Lane also has weak distinction from the built up area. There is no boundary between this area of MOL and development to the north and east. Additionally the scale of the development, and the treelines which separate this field from the wider MOL means that the views are dominated by the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is entirely located within the Enfield Town Conservation Area. Several listed buildings lie in close proximity to the MOL, including the Grade II* listed Church of St Andrew. Therefore the MOL is considered to make a strong contribution to this criterion.

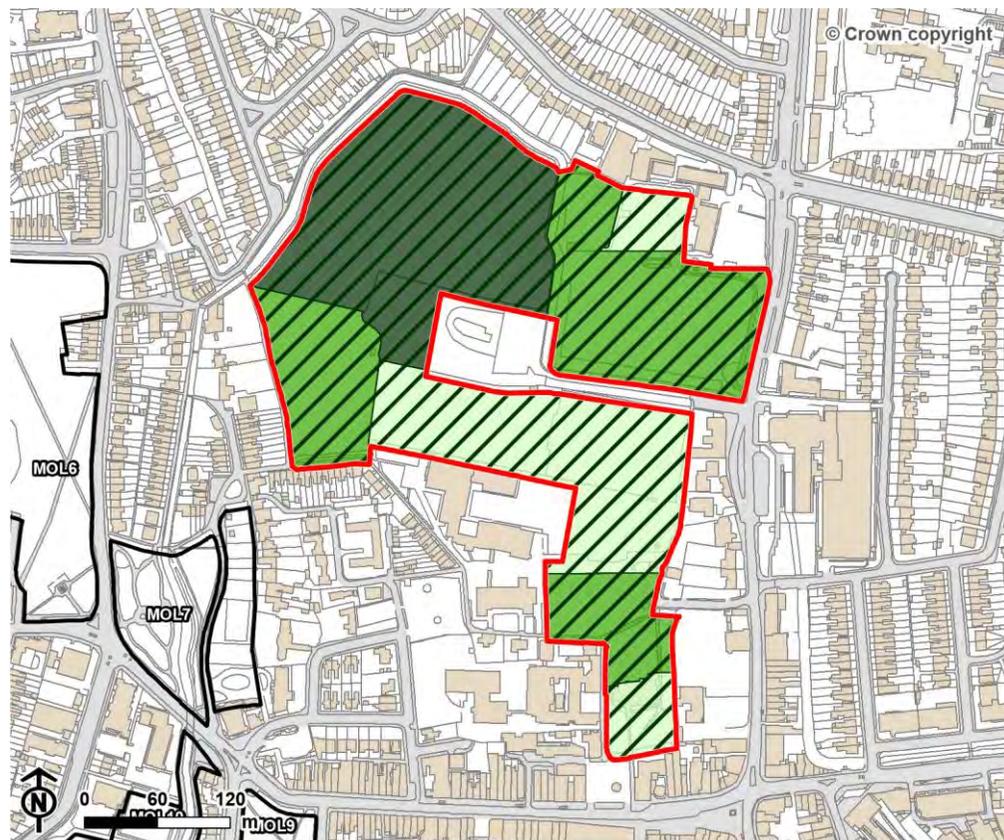

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the New River and Enfield Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1 and/or 3 also make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL5

10.36ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL5

10.36ha

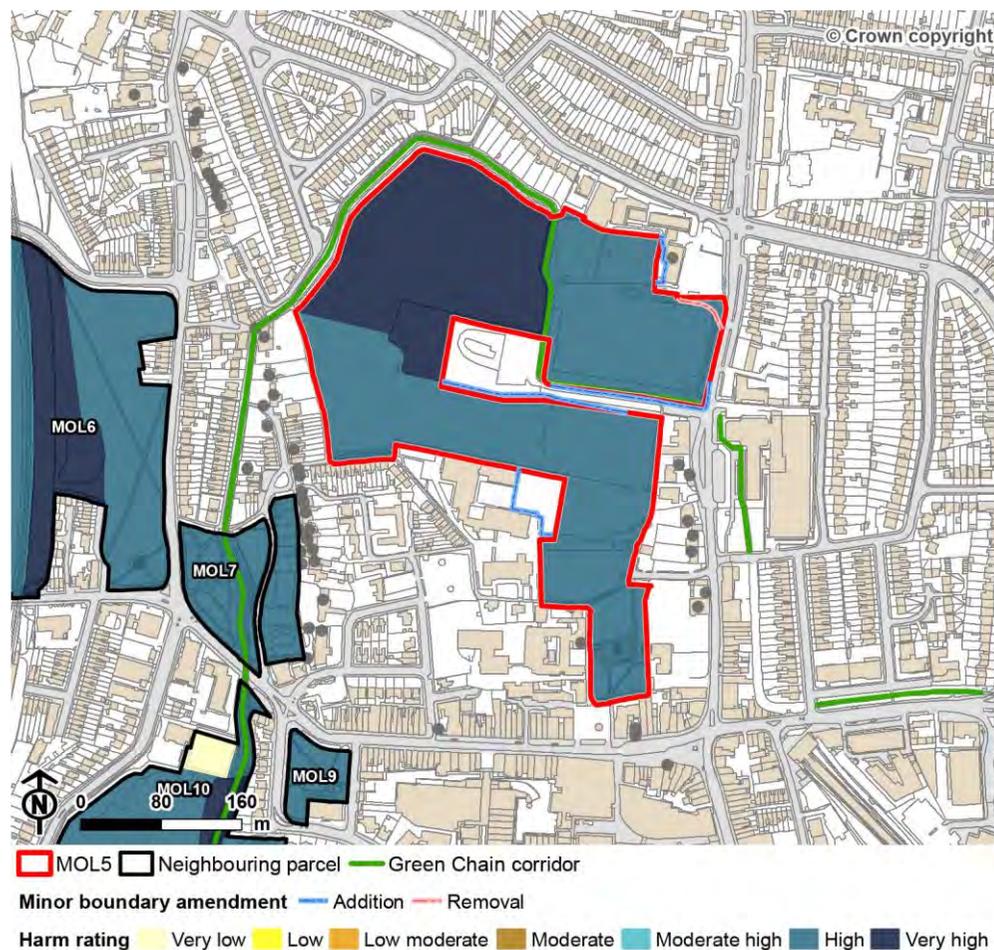

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The north western area of the MOL makes a strong contribution to criteria 1, 3 and 4. Release in this area would breach the strong boundary of the New River to the north and west, split the MOL in two and weaken the distinction of the adjacent MOL to the south from moderate to weak. Release in this area would therefore result in very high MOL harm.

The rest of the MOL makes a strong contribution to criteria 3 and 4. Release of these areas would therefore result in high MOL harm.

MOL5

10.36ha

Potential minor boundary adjustment recommendations

Include open part of playground associated with Enfield County School and realign other boundaries to the north along more recognisable boundaries following the edges of buildings, roads and the edge of the central carpark.

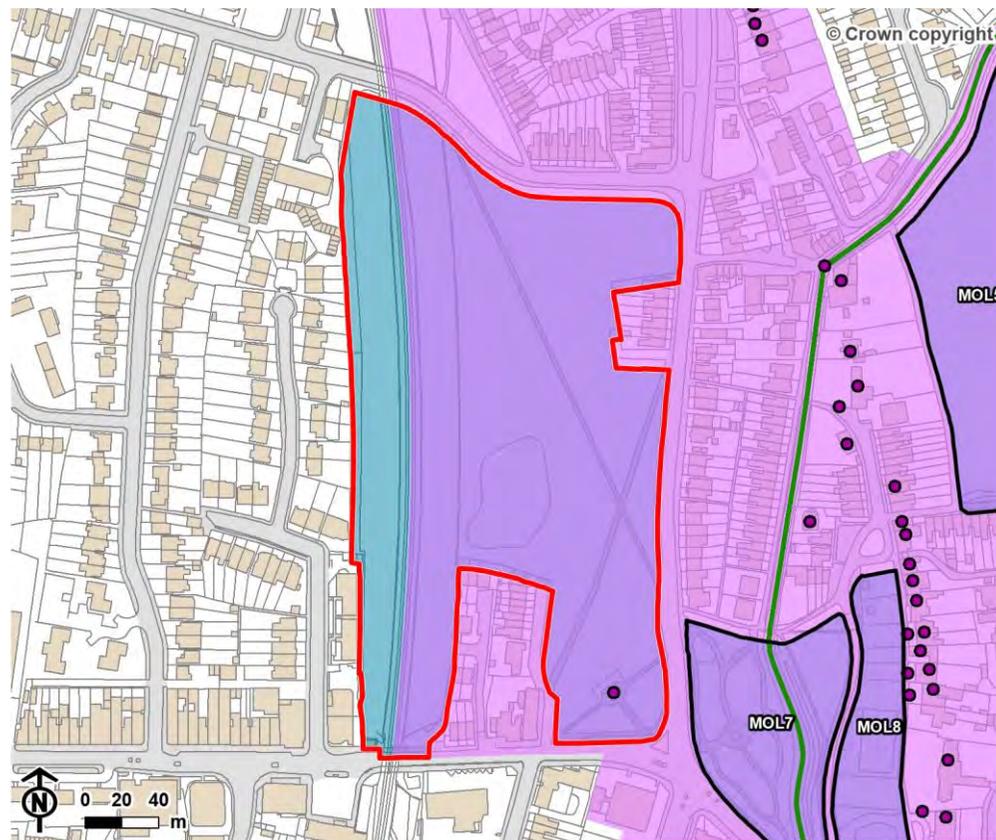

MOL6

Pink fill: Conservation area

Parcel location

The MOL is located to the north west of Enfield town centre at Enfield Chase. The MOL east of the railway line falls within the Enfield Town Conservation Area. The MOL is formed of Chase Green Gardens and a woodland strip alongside the railway line. A Grade II listed war memorial is located at the southern corner of the MOL.

MOL6

4.75ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The thick woodland in the western half of the MOL, coupled with the railways tracks and roads to the north and south provide distinction from the built-up area and limit any views of the urban edge.

The eastern half of the MOL has more moderate distinction from the built-up area. The land is largely free from tree cover and while the roads to the north, east and south provide distinction from the built-up area, the patchy treelines offer intermittent views of the urban edge

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

Most of the MOL is located within the Enfield Town Conservation Area and the MOL contains a Grade II listed War Memorial. Therefore the majority of the MOL is considered to make a strong contribution to this criterion.

The MOL to the west of the railway line falls outside the Conservation Area and is screened from view by the wooded backs of the railway line. Therefore this area is not considered to be functionally linked to Conservation Area or any other designations of national or metropolitan significance and is rated as having a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is within close proximity to the New River and Enfield Link. Consequently, the area of the MOL that makes a strong contribution to Criteria 1 and/or 3 make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL6

4.75ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL6

4.75ha

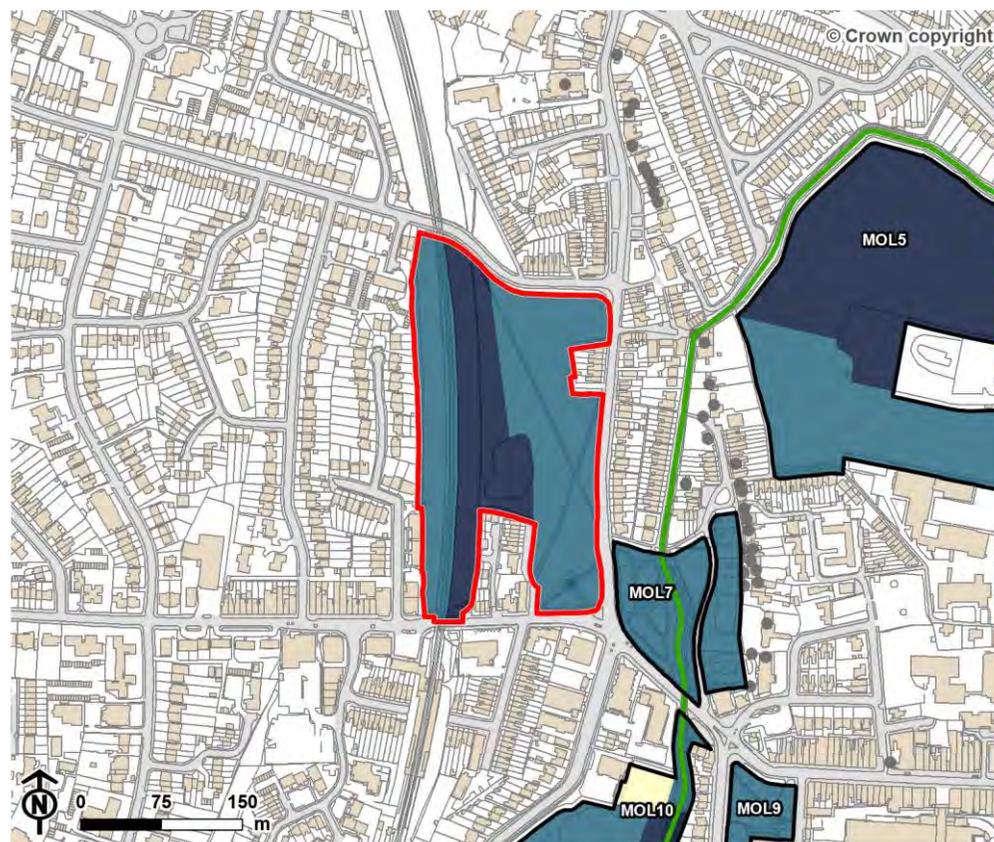

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The woodland east of the railway line makes a strong contribution to criteria 1, 3 and 4. Release of this area would split the MOL in two although the railway line to the west represents a strong boundary, maintaining distinction from the woodland designated as MOL to the west. Release in this section of woodland would therefore result in very high MOL harm.

The land east of the woodland makes a moderate contribution to criterion 1 and a strong contribution to criteria 3 and 4. The woodland west of the railway line makes a strong contribution to criterion 1. Release in any of these areas would therefore result in high MOL harm.

Parcel location

The MOL is located just to the west of Enfield town centre in the historic core of Enfield designated by the Enfield Town Conservation Area. It is formed of Gentleman's Row open space which includes small parking areas, trees and tennis courts. A number of Grade II listed railings run along the eastern edge of the MOL.

MOL8

0.5ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The roads to the north and east, and the patchy treelines provide some distinction from the built-up area, although the patchy treelines allow intermittent views of the urban edge. Although the MOL is narrow, the residential development is of a scale that does not dominate and views are also afforded east, to the adjacent area of MOL. Therefore this area has moderate distinction from the built-up area.

The southern most tip of the MOL has weak distinction from the built-up area. It has no boundary with the urban edge to the south, and the scale of the Enfield Methodist Church dominates views within this section of the MOL, which is also cut off from the wider MOL to the north by a treeline, further limiting views of the open area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is entirely located within the Enfield Town Conservation Area. Several listed buildings lie in close proximity to the MOL, including the Grade II* listed Clarendon Cottage. Therefore the MOL is considered to make a strong contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is within close proximity to the New River and Enfield Link. Consequently, as the MOL makes a strong contribution to Criterion 3 is also makes a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL8

0.5ha

0.39ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. Despite having strong boundaries marked by roads to the north and west and mature trees obscuring views of the built-up area to the east, Enfield Library building dominates the southern edge of the MOL. The scale of this building relative to the size of the open space and the lack of any boundary features marking a distinction between the MOL and the library significantly weaken the influence of the MOL's openness on its distinction from the built-up area.

Weak/No contribution

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Weak/No contribution

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is entirely located within the Enfield Town Conservation Area. Therefore the MOL is considered to make a strong contribution to this criterion.

Strong

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

MOL10

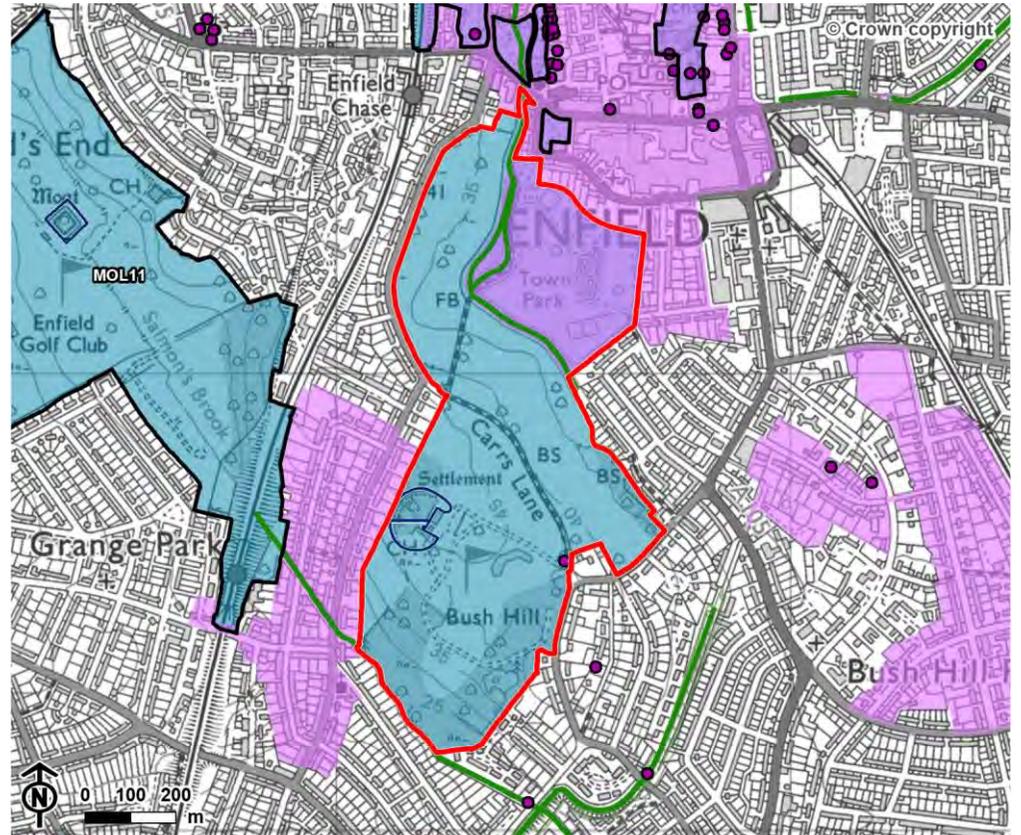

54.64ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The wooded boundaries of Bush Hill Golf Course maintain a relatively strong sense of distinction from the built-up area. In particular the larger areas of woodland to the south. The tree cover also reduces the short and long range views of the urban edge and the MOL is of a size which affords significant views of open land. While the golf club building is located in the centre of the MOL, this is associated with its recreational use, and so does not compromise openness. A treeline and the New River separate the golf Course from Enfield Town Park, though the majority of the park still retains some distinction from the built-up area, with treelines limiting views of the urban edge and views are afforded into the wider MOL to the south.

The area of Enfield Town Park to the south of Enfield Community Church and west of Raleigh Road, as well as the area to the north, off Cecil Road are considered to have moderate distinction from the built-up area. Both areas have weak, patchy tree boundaries which allow views of the built-up area. While these areas of MOL also have views of the wider MOL to the south and west, this is somewhat limited by treelines.

The very northern tip of the MOL has weak distinction from the built-up area. There are no significant boundaries to provide distinction from or screen views of the built-up area to the north, east and west and the scale of the development to the north and west dominates this section of MOL. Furthermore a treeline to the south provides separation from the wider MOL, limiting views of the open land in this direction.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

Town Park in the north eastern corner of the MOL is designated as part of the Enfield Town Conservation Area. The Enfield Town Conservation Area Appraisal notes long views across the Park from the points at which the adjoining roads and paths either end or bend, where the park's open spaces provide a fine setting for the houses in Cecil Road and Essex Road. Wider south-facing views of the golf course beyond Trent Park are also noted from the northern entrance to Town Park. The Grange Park Conservation Area lies directly to the west of the MOL. The Grange Park Conservation Area Appraisal notes the distinctive views out of and across the Conservation Area to the tree backdrops of the golf course boundaries to the east and the west. Therefore the woodland along the western boundary of the MOL is considered to make a strong contribution to the Grange Park Conservation Area's setting. The land behind the Bush Hill Golf Club in the southern half of the MOL is designated as the Earthworks at Old Park Scheduled Monument. The designation marks the remains of late Bronze Age/early Iron Age hillfort which has been partially levelled and mutilated by the construction of the golf course. The most intact parts of the monument are located in the woodland obscured from view. Consequently, only the designated land is considered to contribute to this asset. Finally, the entrance lodge to Bush Hill Park Golf Club is designated as a Grade II listed building, but it lies just outside the MOL. Its listing makes no reference to its wider setting within the MOL and mature trees screen views. Consequently, the MOL is not considered to contribute to this historic asset's immediate setting.

The remaining areas of MOL are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

MOL10

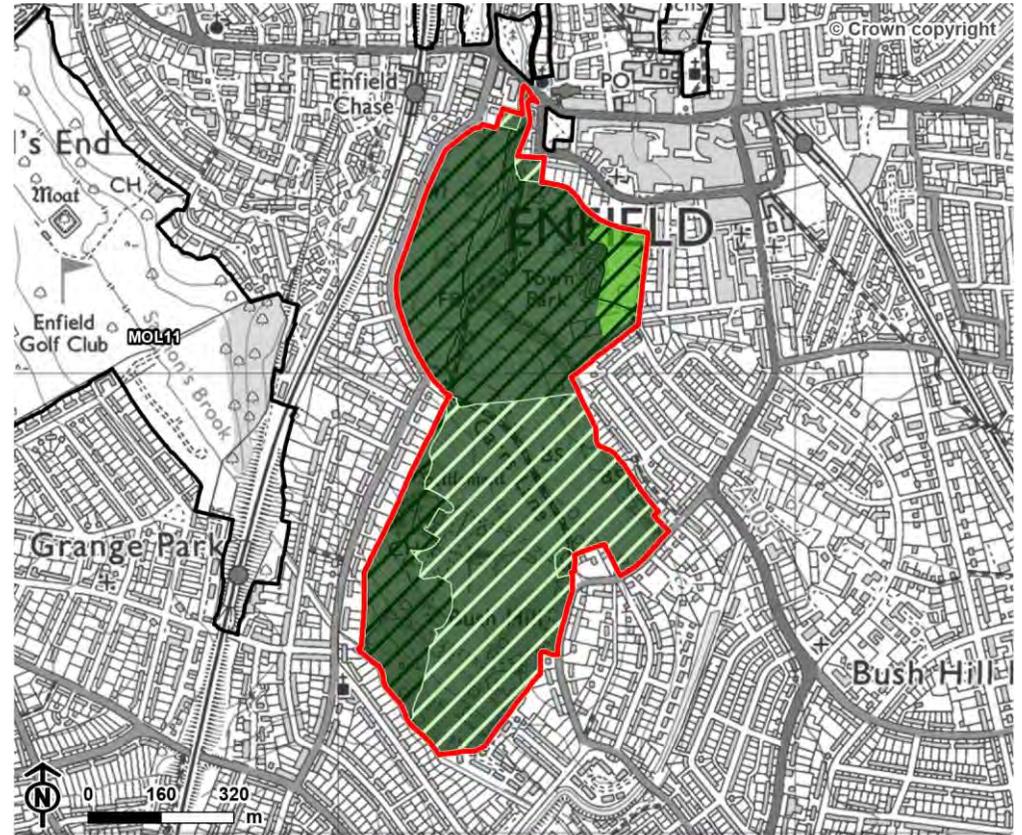

54.64ha

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Salmon Brook Link and the New River and Enfield Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1 and 3 also make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Salmon Brook Link and the New River and Enfield Link. However, the small bowls club at the very northern tip of the MOL makes a weak/no contribution to the other three MOL criteria. Consequently, this area of the MOL also makes a weak/no contribution to this criterion.

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL10

54.64ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

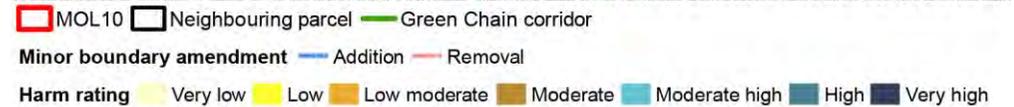

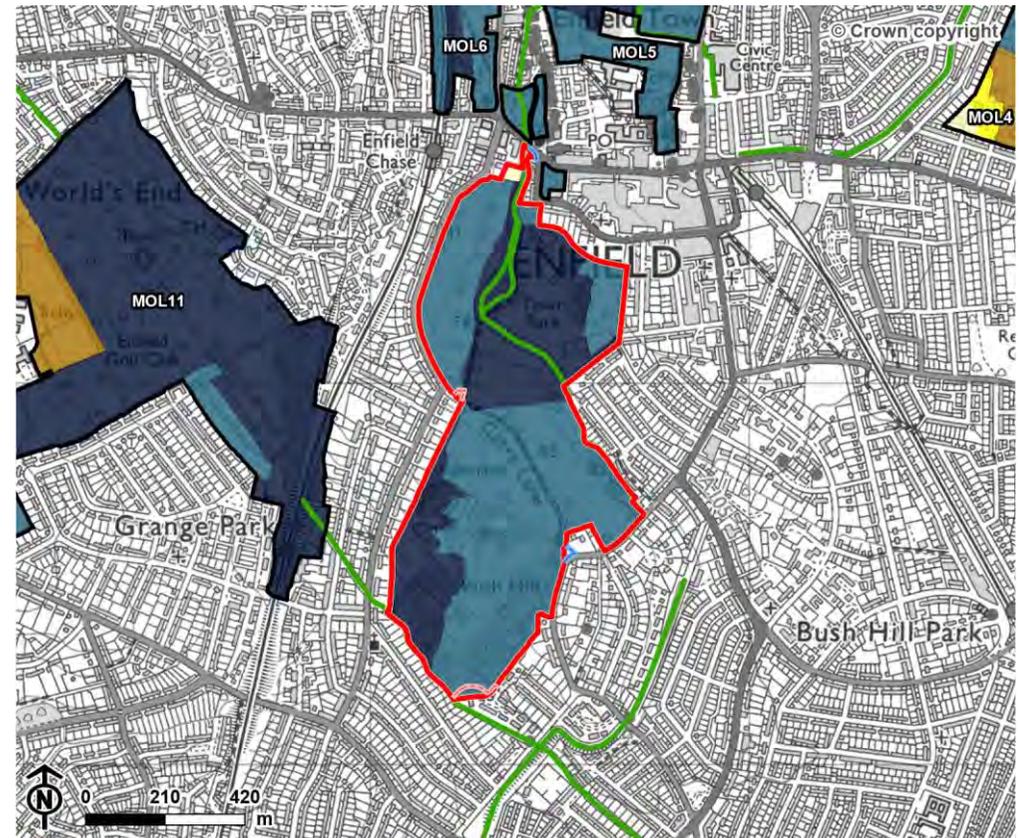

The north eastern corner of the MOL containing Town Park and the treeline to the west and land directly to the south within view of the Enfield Town Conservation Area generally make a strong contribution to criteria 1, 3 and 4. Similarly the areas in the southern half of the MOL that overlap or are within view of the historic assets within and in the vicinity of the MOL also make a strong contribution to criteria 1, 3 and 4. Release in these areas of the MOL would therefore result in very high MOL harm.

The three entrance points to Trent Park at the northern tip along the New River, off Cecil Road and Essex Road all fall within or in view of the Enfield Town Conservation Area meaning they make a strong contribution to criteria 3 and 4; however, these locations are generally more contained by buildings or mature trees maintaining some distinction from the wider MOL. Consequently these areas make a more moderate contribution to criteria 1. The portions of the golf course that lie to the west of Trent Park and south of the area in view of the Enfield Town Conservation Area make a strong contribution to criteria 1 and 4. Release in these areas of the MOL would therefore result in high MOL harm.

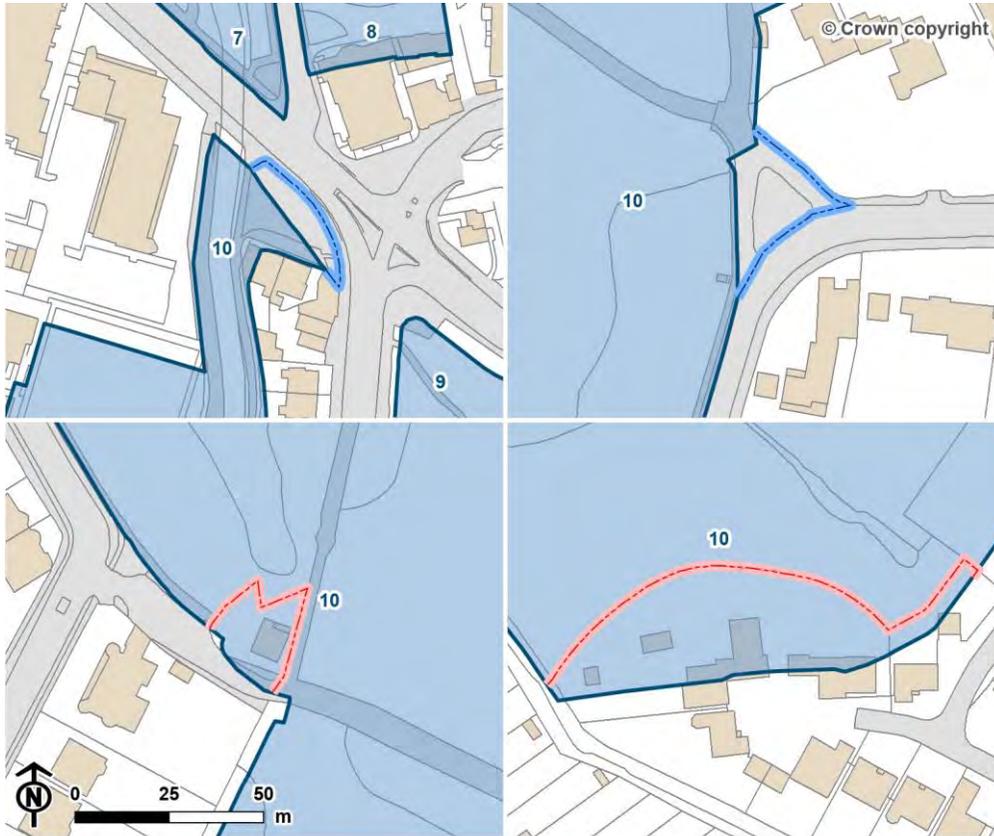

The very northern tip of the MOL has weak distinction from the built-up area and therefore makes a weak/no contribution to criteria 1. The western half of this area contains a small bowls club which is screened from the Enfield Town Conservation Area. It therefore also makes a weak/no contribution to criteria 3 and 4. Release in this area of the MOL would therefore result in very low MOL harm.

MOL10

54.64ha

Potential minor boundary adjustment recommendations

□ MOL parcel

■ MOL

Minor boundary amendment — Addition — Removal

Extend the area of MOL to the road to include all open space and follow a more recognisable boundary.

Exclude the area of MOL containing dwelling and follow the recognisable treeline marking the edge of the golf course.

Remove the MOL at the southern tip so it does not cut across the residential building and follows recognisable property boundary running along edge of large built-up area.

MOL. A Schedule Monument (Medieval Moated Site) lies in the centre of the MOL while the north western corner and south eastern corners of the MOL are designated as SINCS.

MOL11

62.65ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The wooded slopes and boundaries of Enfield Golf Course and the Cheyne Walk Open Space to the south maintain a strong sense of distinction from the built-up area. Mature tree cover minimises short and long-range views of the built-up area. Where short-range views do exist, the MOL slopes away from the built-up area maintaining a strong sense of distinction. The railway line running through the eastern end of the MOL serves to separate this area from the wider MOL, although the dense woodland contiguous with the woodland of Cheyne Walk Open Space to the north west also prohibits views of the built up area, maintaining a strong sense of openness and distinction.

The open and unwooded MOL in between the built-up area and scrubland at the north western corner (north of Highlands School), south western corner (Old Grammarians Rugby and Football Club and New Calypsonians Cricket Club) and southern ends (Cheyne Walk Allotments) have slightly more of a relationship with the built-up area. Mature trees bordering these locations serve to screen the wider MOL from view, increasing the influence of the built-up area where gaps along the tree-lined edges of the adjacent built-up areas offer intermittent views of the urban edge. These portions of the MOL are therefore considered to have moderate distinction from the built-up area.

The open playing fields associated with Highlands School or Grange Park Primary School to the west have weak distinction from the built-up area. The scale of the school buildings relative to the size of the open playing fields, screened from the wider MOL by mature tree-lined edge of Enfield Golf Course, and the lack of any significant boundary features marking a distinction between the MOL and the schools weaken the influence of the MOL's openness on its distinction from the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is over 60ha in size, making it large enough to be considered of metropolitan significance. The MOL contains a range of facilities and features offering recreational, ecological, landscape, cultural and green infrastructure benefits, including Enfield Golf Club, Cheyne Walk open space, the Old Grammarians RFC and New Calypsonians Cricket Club, as well as playing fields associated with Highland School and Grange Park Primary School. Salmon's Brook flows through the centre of the MOL. A Schedule Monument (Medieval Moated Site) lies in the centre of the MOL while the north western corner and south eastern corners of the MOL are designated as SINCs.

The only discrete areas of the MOL that could be released without compromising the existing range of facilities and features within the MOL are: a) the inaccessible wooded banks of the railway line in the east either side of Grange Park railway station; b) some (not all) of the playing fields associated with either Highlands School or Grange Park Primary School to the west; or c) the triangular pocket of accessible scrubland in the north east corner north of Highlands School. Any release in these locations would need to reprovide or compensate for the loss of recreational, ecological and/or the general green infrastructure functions of these facilities and features elsewhere within the area of MOL.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The Grange Park Conservation Area lies directly to the south and east of the MOL. The Grange Park Conservation Area Appraisal notes the distinctive views out of and across the Conservation Area to the tree backdrops of the golf course boundaries to the east and the west. Therefore the woodland along the railway line and out across the Cheyne Walk Open Space are considered to make a strong contribution to the Grange Park Conservation Area's setting. Highlands Conservation Area lies to the south west of the MOL ending at the

MOL11

62.65ha

western edge of Worlds End Lane, although the Highlands Conservation Area Appraisal makes no reference to the MOL, or views that include it, to the setting of the Conservation Area. Finally, the centre of Enfield Golf Course is designated as the Medieval Moated Scheduled Monument surviving as earthworks and below ground remains. The most intact parts of the monument are located in the woodland obscured from view. Consequently, only the designated land is considered to contribute to this criterion.

The remaining areas of MOL are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

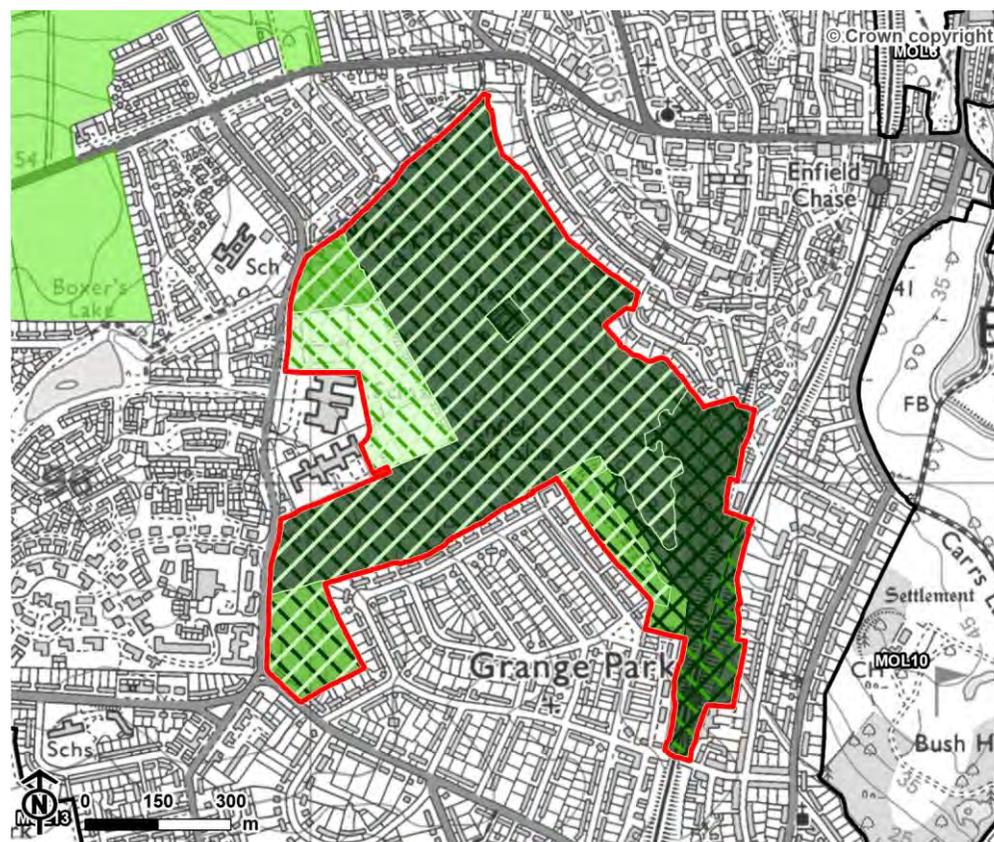

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1, 2 and 3 make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a moderate contribution to Criteria 1 and/or 2 make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Contribution to Criterion 1	Strong	Moderate	Weak/no
Contribution to Criterion 2	Strong	Moderate	Weak/no
Contribution to Criterion 3	Strong	Moderate	Weak/no

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL11

62.65ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

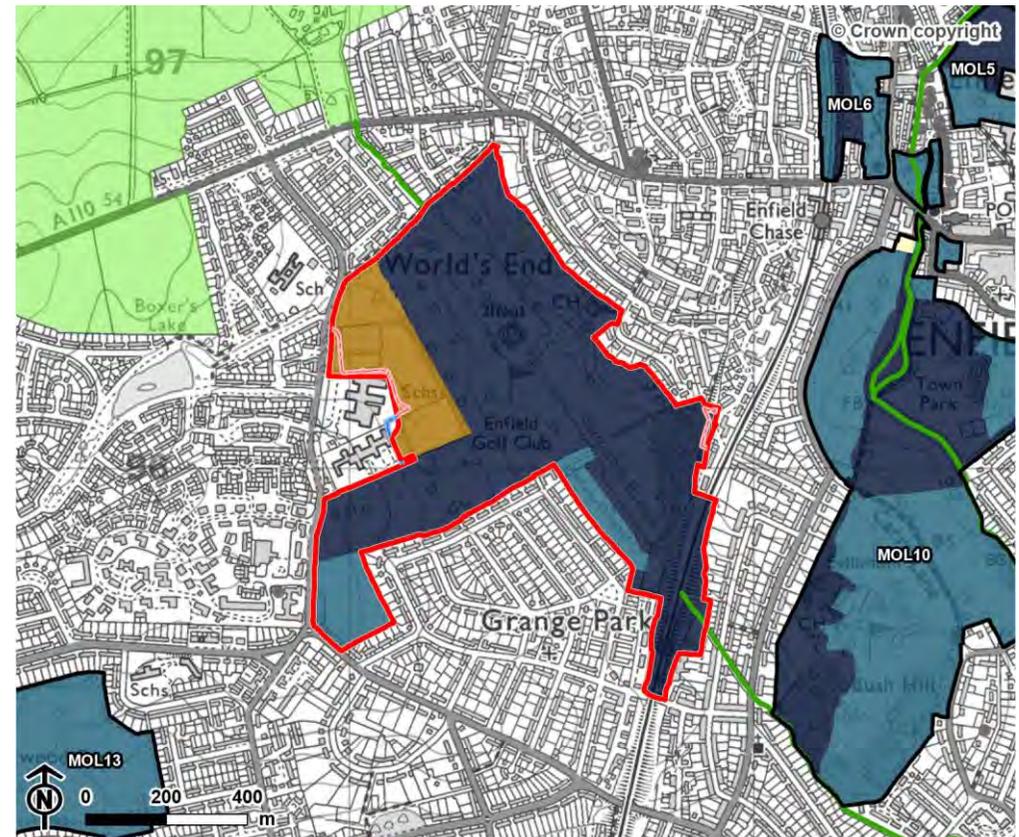

Enfield Golf Course and the adjoining Cheyne Walk open space and woodland make a strong contribution to criteria 1 and 4. The same area makes a strong contribution to criteria 2, with the exception of the less accessible woodland in the south eastern corner of the MOL; however the woodland surrounding and south east of Cheyne Walk open space makes a strong contribution to criteria 3, as the scheduled monument in the centre of the golf course. Release in these areas of the MOL would therefore result in very high MOL harm.

The Old Grammarians RFC and New Calypsonians Cricket Club in the south western corner of the MOL and the allotments adjacent to Cheyne Walk open space make a strong contribution to criteria 2 and 4 but a moderate contribution to criteria 1. Both areas have some relationship with the built-up area and are surrounded by mature trees screening them from the view of the wider MOL, which would limit the impact of their release on the distinction of adjacent MOL. The west boundary to the playing fields in the south western corner formed by World's End Lane and Green Dragon Lane maintain a greater sense of distinction from the built-up area in this direction. Release in these areas of the MOL would therefore result in high MOL harm.

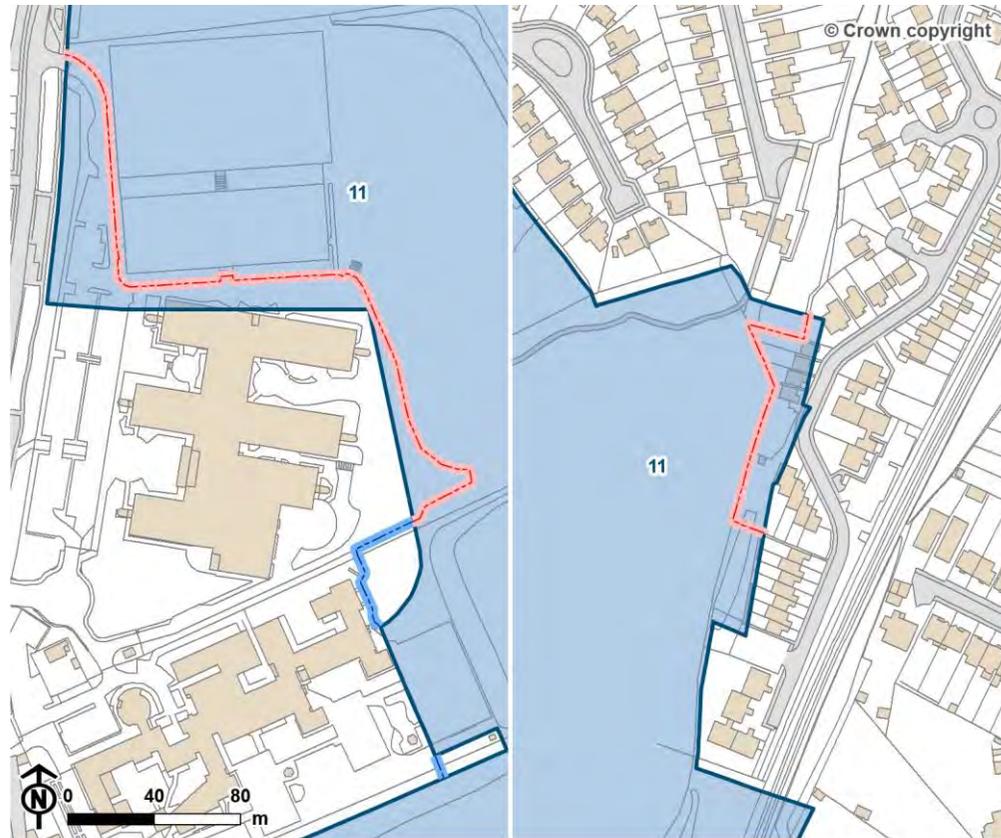

The open playing fields associated with Highlands School or Grange Park Primary School to the west and the scrubland to the north make a moderate contribution to criteria 2 and 4. The scrubland also makes a moderate contribution to criteria 1. The visual presence of Highlands School and Grange Park Primary School in the built-up area is significant here coupled with and the mature regular tree-lined boundary with the golf course to the east and south limit the potential for release in these locations to impact the distinction of adjacent MOL. Release in these areas of the MOL would therefore result in moderate MOL harm.

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The roads and treelines to the north, south and west provide distinction from the built-up area, though the boundaries to the north and south allow for intermittent views of the built-up area, and the buildings west of Chase Side Road weaken this boundary. The patchy treelined boundary to the east is weaker as it allows for views of the urban development. There are two small buildings and a car park area located along the western edge of the MOL. While the buildings compromise the openness of the land upon which they sit and the immediate vicinity, their scale and treelines limit their impact on the wider MOL. There is also a building located on the southern edge of the MOL, however this is associated with the recreational use of the playing fields and so is appropriate. Therefore the entire MOL is considered to have moderate distinction from the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is contiguous with Oak Hill Park in the neighbouring Borough of Barnet. Oak Hill Park is over 60ha in size, making it large enough to be considered of metropolitan significance, both in isolation and in combination with Bramley Sports Ground. In combination the MOL contains a range of facilities and features offering recreational, ecological, landscape, cultural and green infrastructure benefits, and the outdoor sports pitches in Bramley Sports Ground are not available elsewhere within the wider MOL and therefore make a strong contribution to this criterion.

The only discrete areas of the MOL that could be released without compromising the existing range of facilities and features within the wider MOL are the buildings and woodland in the north western corner of the MOL.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL contains a Grade II listed clock tower in the centre of the northern half of the MOL. Its listing makes no reference to its setting within the MOL; however the lack of tree cover within the MOL offers long ranging views of the historic feature from the majority of the MOL, with the exception of the developed areas and block of woodland at the northern end.

The developed and wooded areas of the MOL that do not have a visual relationship with the historic clock are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

MOL12

8.44ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 2 ▨ Strong ▨ Moderate ▨ Weak/no

Contribution to Criterion 3 ▩ Strong ▩ Moderate ▩ Weak/no

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL12

8.44ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The majority of Bramley Sports Ground makes a moderate contribution to criteria 1. The buildings associated with the outdoor facilities in the north eastern corner and southern boundary of the MOL screen views of the listed clock tower in the central open part of the MOL, reducing their contribution to criteria 3, although their contribution to the diverse range of facilities and features in the wider MOL coupled with Oak Hill Park to the south west is recognised by a strong contribution to criteria 2 alongside the open sports fields. Release in these areas of the MOL would therefore result in high MOL harm.

The two small buildings and a car park area located along the western edge of the MOL, and the woodland to the north make a moderate contribution to criteria 1 and 2. The buildings compromise the openness of the land upon which they sit and the immediate vicinity, meaning their release would do little to affect the distinction of the adjacent MOL. Similarly, the release of the woodland to the north, separated from the wider MOL by a connecting road between Chase Side Road to the west and Bramley Road to the north east, would have a limited impact on the distinction of the wider MOL to the south. Release in these areas of the MOL would therefore result in moderate MOL harm.

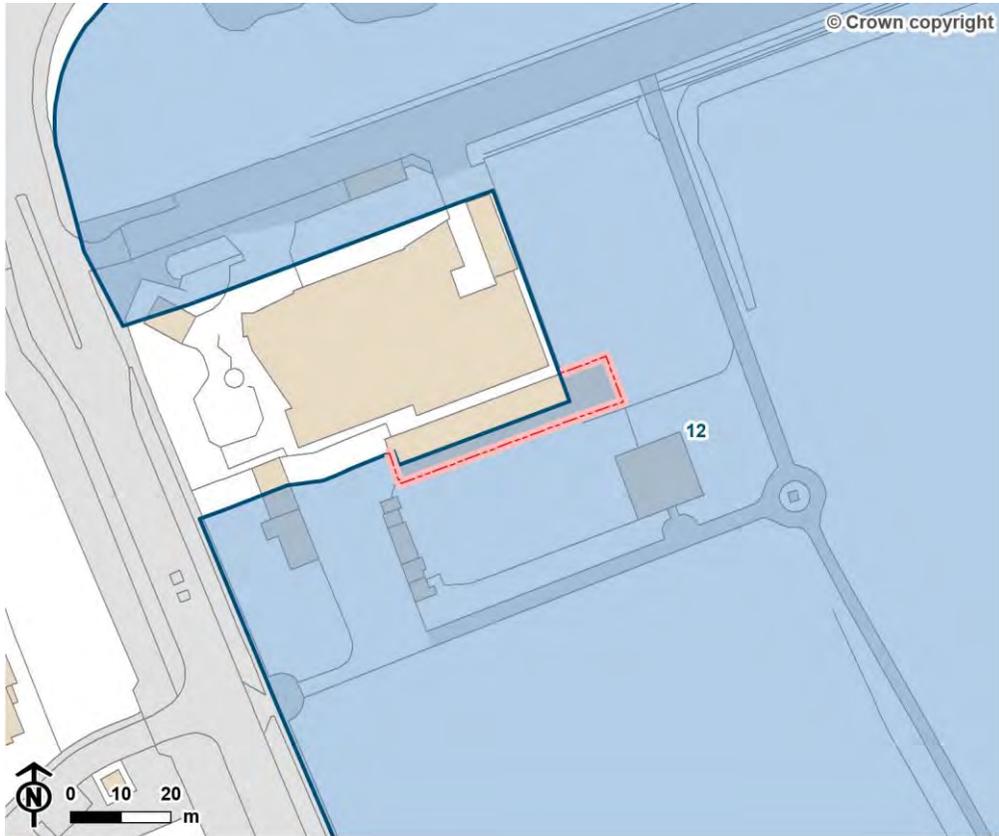

MOL12

8.44ha

Potential minor boundary adjustment recommendations

Exclude linear building associated with facility inset within MOL.

■ MOL

■ MOL13 ■ MOL
■ Conservation area

Parcel location

The MOL is located just to the south of Oakwood. It consists of Oakwood Park which is partially wooded and contains tennis courts and a playground. The wooded banks of the railway line represent the western edge of the MOL.

MOL13

28.1ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. Treelines and residential gardens which form the boundaries of the MOL provide some distinction from the built-up area. While the patchy treelines allow intermittent views of the urban development, the scale of this development and the size of the MOL, which afford some long ranging views of the wider MOL, limits their impact on distinction. The woodland in the MOL increases distinction. The railway tracks which run close to the western edge of the MOL provide further distinction, but limit the views of the wider MOL for the area of land contained to the west. However, the thick treelines and woodland here sufficiently screens the built-up area and the impact is limited. These portions of the MOL have strong distinction from the built-up area.

An area along the northern edge of the MOL, including tarmac playing pitches is considered to have more moderate distinction from the urban edge. The residential gardens and patchy treelines continue to provide some distinction from the urban edge, but the built-up area is visible and views of the wider MOL are limited, particularly in the area around the tarmac playing pitches due to the thick treeline to the south and west.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

MOL13

28.1ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL13

28.1ha

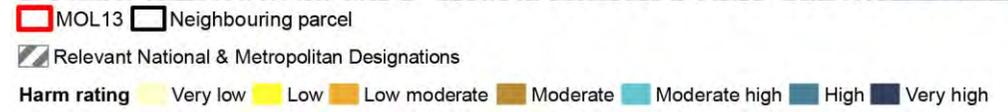

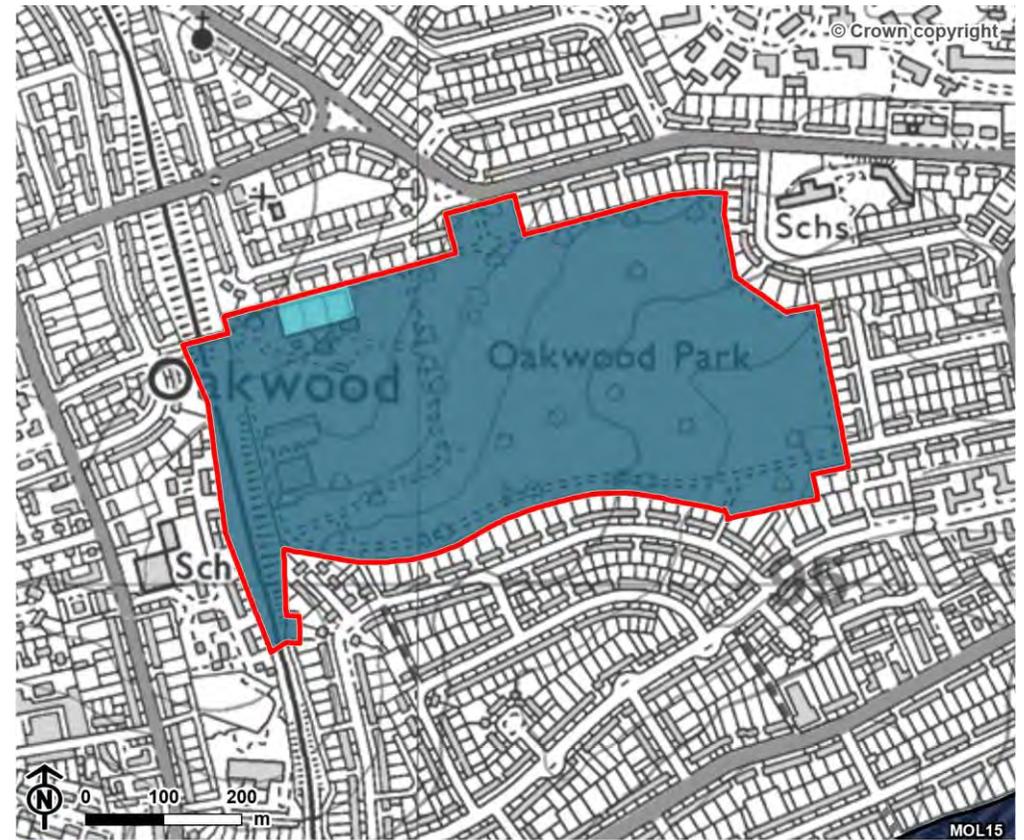

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The vast majority of the MOL makes a strong contribution to criteria 1. The regular boundaries of the MOL marked by treelines and residential gardens provide distinction. Release of all but one area of the MOL would therefore result in high MOL harm.

The area along the northern edge of the MOL, including tarmac playing pitches makes a moderate contribution to criteria 1. Although the thick treeline to the south and west largely screen views of the wider MOL, release in this area would breach the regular boundary marked by the perimeter path and trees around the edge of the MOL resulting in some impact on the distinction of adjacent MOL to the east. Release in this area of the MOL would therefore result in moderate-high harm.

MOL14

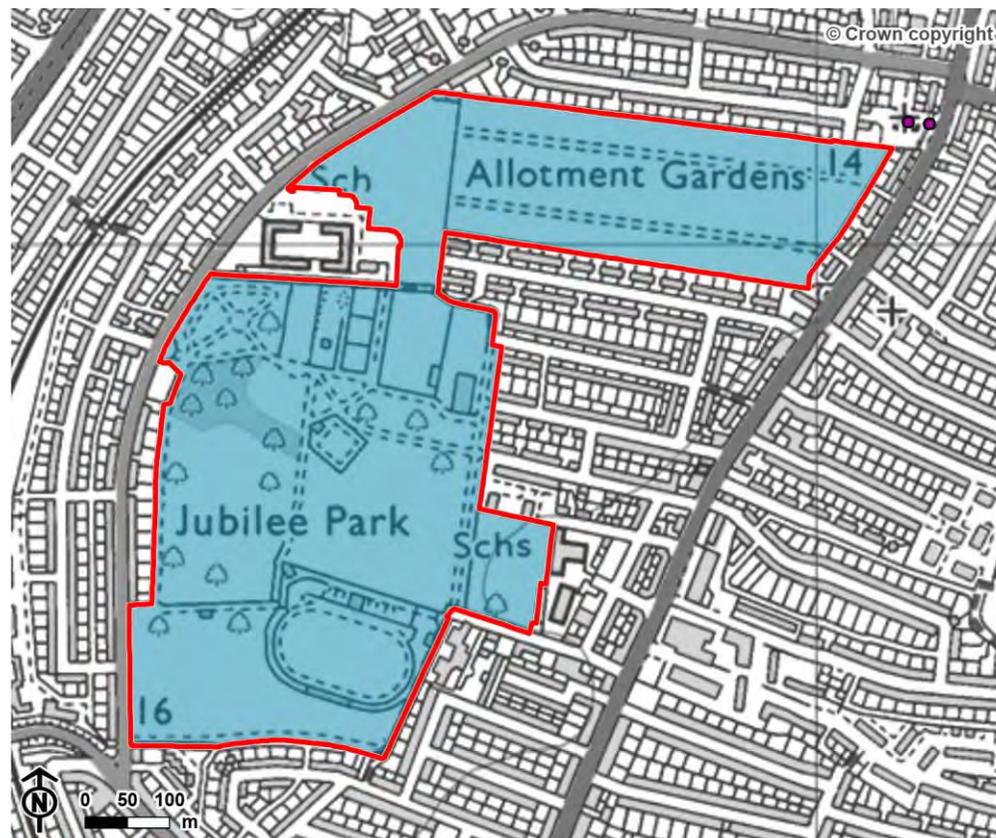

31.23ha

■ MOL14
■ MOL

Parcel location

The MOL is located towards the eastern edge of the Borough, to the north of Edmonton. It consists of Jubilee Park which includes a pitch and putt and a play area, Henry Barrass Recreation Ground, playing fields associated with Galliard Primary School and Houndsfield Primary School and an allotment. One of the school buildings of Houndsfield Primary School

■ MOL14 ■ MOL
● Listed building

is located within the MOL, in an eastern corner of the MOL.

MOL14

31.23ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of a school.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The treelines and residential gardens provide some distinction from the built-up area, particularly to the west where there is a thick treeline and to the north where there is some sparse woodland, providing further distinction. Extensive views of the wider open land within the MOL help to limit the influence of the built-up edge in the central portion, though the more patchy treelines to the south and east allow intermittent views.

The allotments forming the northern section of the MOL, the play area in the north eastern corner of the southern portion and the playing fields in the south corner have more moderate distinction from the built-up area. These locations have weaker boundaries with the built-up area, being formed of patchy treelines, open residential gardens or roads with stronger views of the built-up area. Furthermore, each of these areas is partially separated from the wider MOL by treelines or the built-up area, reducing their relationship with the MOL's larger open areas.

The north eastern corner of the MOL, formed of playing fields associated with Galliard Primary School has weak distinction from the built-up area. There is no boundary between this area of MOL and the school to the south and the scale of this development dominates this area of MOL, which is cut off from the wider MOL by a thick treeline to the east and south. Similarly the MOL adjacent to Houndsfield Primary School, on the eastern edge, also has weak distinction from the built-up area. It also has no boundary features to separate it from development to the north and east and the scale of development dominates the area, which is separated from the wider MOL by a treeline to the west. There is a building located in the corner of this area, which compromises the openness of the land on which it sits and in the vicinity. Its influence on the wider MOL is limited by the treeline to the west.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

MOL14

31.23ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL14

31.23ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The majority of Jubilee Park makes a strong contribution to criteria 1. Release in this area would therefore result in high MOL harm.

The play area in the north eastern corner of Jubilee Park and the playing fields in the south of the Park make a moderate contribution to criteria 1. Although these locations have weaker boundaries with the built-up area, being formed of patchy treelines, open residential gardens, or roads with stronger views of the built-up area, release of the western half of the north eastern corner would split the MOL in two. Furthermore, release in the south would result in the loss of the relatively strong western boundary of Galliard Road, which would be replaced by a well treed northern edge but an open eastern edge which has open views of the wider MOL to the east and north east. Therefore, release in this location would reduce the contribution of the MOL directly to the east to criteria 1 from strong to moderate. Release of these areas would therefore result in moderate-high MOL harm.

The allotments forming the northern section of the MOL and the eastern half of the eastern corner of Jubilee Park make a moderate contribution to criteria 1. These areas have weaker boundaries with the built-up area, being formed of patchy treelines, open residential gardens or roads with stronger views of the built-up area. Furthermore, each of these areas is partially separated from the wider MOL by treelines or the built-up area, reducing the impact of release on the distinction of the wider MOL to the west and south. Release of these areas would therefore result in moderate MOL harm.

The north eastern corner of the MOL, formed of playing fields associated with Galliard Primary School makes a weak/no contribution to all MOL criteria. However, the area is fundamentally open and its release would split the MOL in two isolating the moderately contributing allotments to the east from the wider MOL containing Jubilee Park to the south. Release of this areas would therefore result in low-moderate MOL harm.

The MOL adjacent to Houndsfield Primary School, on the eastern edge of the MOL makes a weak/no contribution to all criteria. However, the area is fundamentally open. Release of this areas would therefore result in low MOL harm.

The building located in the south eastern corner of Houndsfield Primary School is directly adjacent to the built-up area and is therefore indistinguishable from it. Release of this area would therefore result in no/very low harm.

MOL14

Parcel location

The MOL is located near the eastern edge of the Borough, to the south west of Southgate. It is formed of Grovelands Park, which is designated as a Grade II* Registered Park and Garden. The park contains a lake, woodland, open spaces, a pitch and putt, Grovelands Bowls Club, tennis courts, the Grade I listed Grovelands Park Hospital and Grade II listed

Granary, and the Grade II listed Lodge to Grovelands Park. Two dwellings lie along the northern edge of the MOL. Winchmore Hill Green Conservation borders the Park to the north and Meadway Conservation Area borders the Park to the south.

MOL15

48.67ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of housing in the north of the MOL.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. Much of the MOL has strong boundaries to create distinction from the built-up area, consisting of thick treelines / woodland, residential gardens and to the south a road. The reasonably extensive woodland in the southern and eastern portions of the MOL further adds to this distinction and views of the built-up area are very limited. To the north west the land is not wooded, but there is still a thick treeline and long gardens to provide distinction from the built-up area and the trees coupled with the open views of the MOL in this area limit the influence of the intermittent views. There are three urbanising buildings located in the MOL, to the north, centre and south. These compromise the openness of the land on which they sit but their wider influence is limited by the surrounding tree cover.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is designated a Grade II* Registered Park and Garden. The Park contains listed buildings including the Grade I listed Grovelands Park Hospital and adjacent clusters to the east and west associated with the neighbouring Winchmore Hill Green Conservation Area and Meadway Conservation Area. Therefore the MOL is considered to make a strong

contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

MOL15

48.67ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

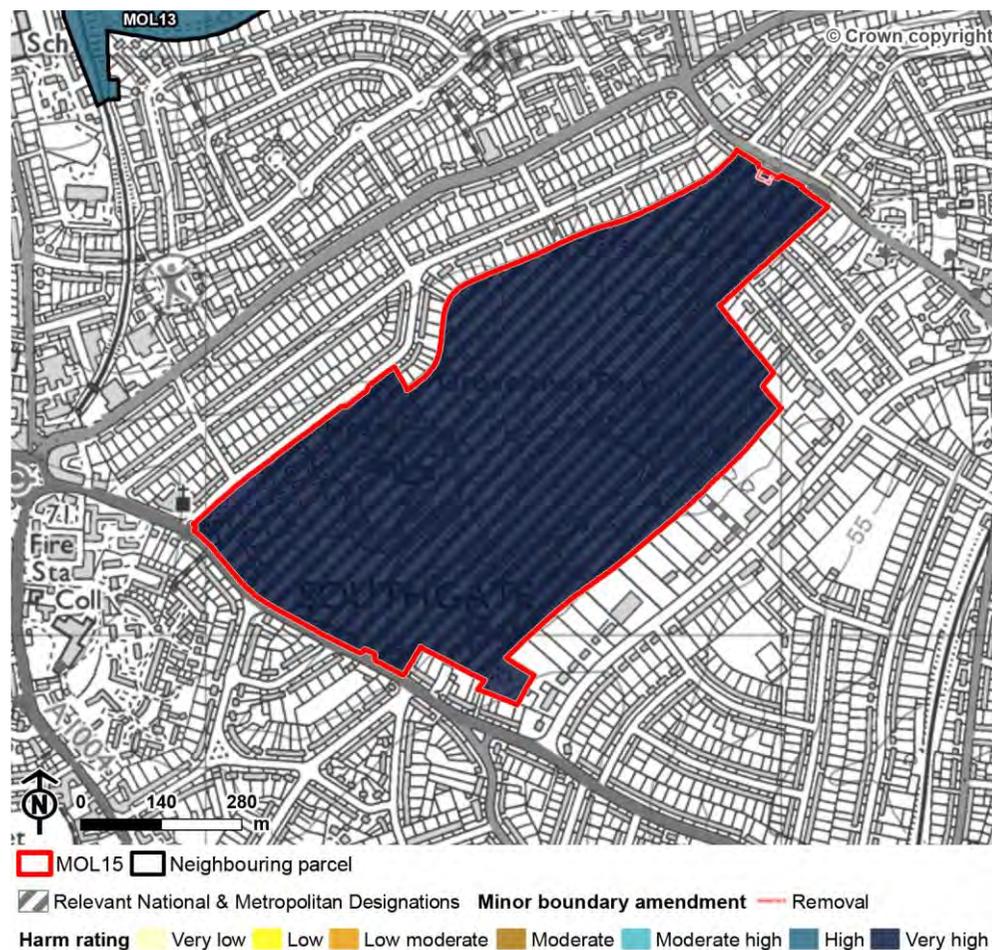

MOL15

48.67ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The MOL makes a strong contribution to criteria 1 and 3. The MOL is designated as a Grade II* Registered Park and Garden in recognition of its designed landscape and associated facilities and features, including a number of listed buildings such as the Grade I listed Grovelands Park Hospital Block. Release in any area would therefore result in very high MOL harm.

The New River Metropolitan SINC follows the western and northern edges of the MOL.

MOL16

8.36ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL has strong boundary features providing strong distinction from the built-up area. These are formed by the New River to the north, a small area of woodland to the west and roads and treelines to the south and east. While these work to limit views of the built-up area, particularly in at the southern and eastern boundaries, other patchy treelines do allow some intermittent views of the urban edge. However, open views of the wider MOL serve to mitigate their influence.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL follows a section of the New River designated as a Metropolitan SINC. The green spaces within the MOL have the potential to be of value to the species using the SINC and are therefore recognised as making a moderate contribution to this criterion. The MOL containing buildings and hardstanding associated with car parks and outdoor sports do not currently contribute; however, as areas of fundamentally open land they could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the New River and Enfield Link. Consequently, as the area makes a strong contribution to Criteria 1 and 3 it also makes a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL16

8.36ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL16

8.36ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The MOL makes a strong contribution to criteria 1 and 4 and a moderate contribution to criteria 3. Release in any area would therefore result in high MOL harm.

In the north east is Bury Lodge Bowls Club with a club house and bowls area.

MOL17

10.33ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of housing.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The main roads and treelines to the east and north provide reasonable distinction from the built-up area and the patches of trees within it, work to limit views of the built-up area in the central part of the MOL.

The area along the northern edge of the MOL has more moderate distinction from the built-up area. A small area of hardstanding at the north eastern corner has no significant boundary features with the built-up area to the north east and trees directly to the south restrict open views of the wider MOL. The small park in the north western corner of the MOL formed of flowerbeds has boundaries which provide some distinction from the built-up area although intermittent views are afforded and the treeline to the south and east work to limit the views of the wider, more open MOL to the south. There is a building located in this area which compromises the openness of the land on which it sits and that in the immediate vicinity. Though its impact is limited by its isolated and moderate scale.

The playing fields associated with Edmonton County School and the allotments just to the south of this have weak distinction from the built-up area. These areas have no strong boundary features between the MOL and the residential development to the south and school to the east. Furthermore, treelines to the north and east separate it from the wider MOL increasing the influence of the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The Grade II* listed Salisbury House and associated Grade II listed wall are located just within the northern edge of the MOL. Their listings make no reference to their setting within the MOL. Consequently, the contribution of the MOL to these assets is restricted to their immediate vicinity.

The remaining areas of MOL are not considered to be functionally linked to any designations of national or metropolitan significance and are therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a strong contribution to Criteria 1 and 3 also make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a moderate contribution to Criteria 1 also make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL17

10.33ha

The MOL is connected to the Salmon Brook Link. There is however an area within the MOL that makes a weak/no contribution to the other three MOL criteria. Consequently, this area also makes a weak/no contribution to this criterion.

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL17

10.33ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

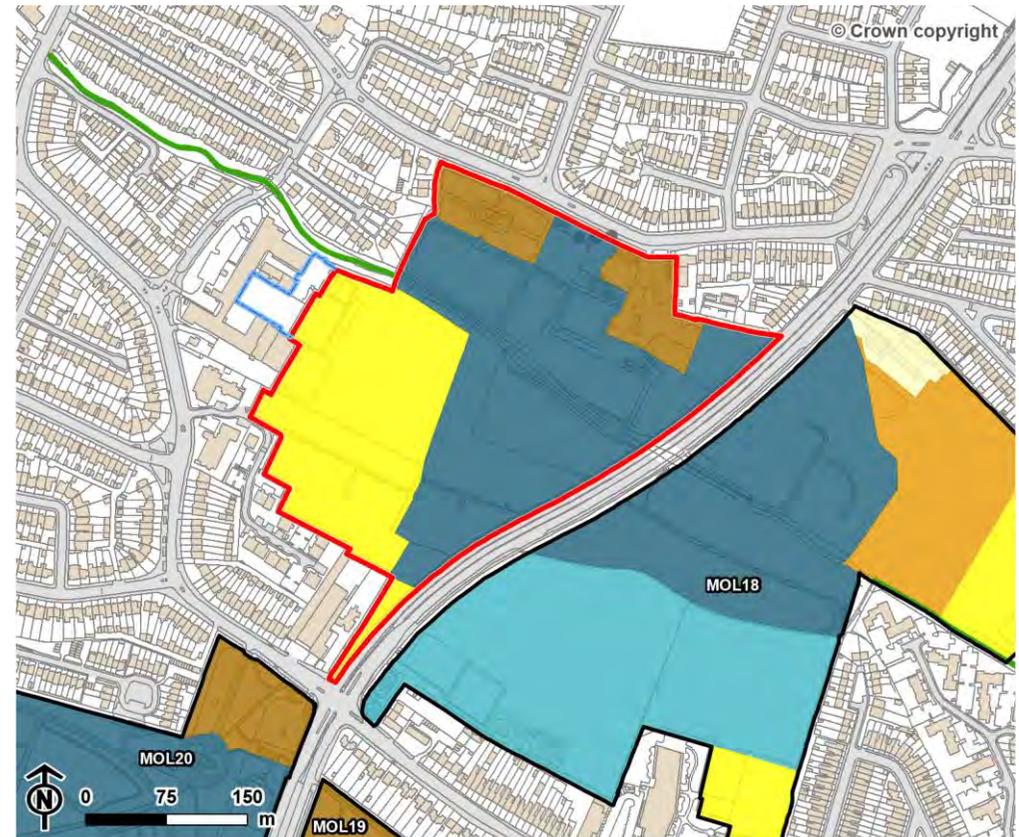

The majority of the MOL makes a strong contribution to criteria 1 and 4, and the land in the immediate vicinity of the Grade II* listed Salisbury House and associated Grade II listed wall at the northern edge of the MOL also makes a strong contribution to criterion 3. The listed building does compromise the openness of the land on which it sits and that in the immediate vicinity, although its impact is limited by its isolated and moderate scale. Release in any of these areas would therefore result in high MOL harm.

Two areas along the northern edge of the MOL separated by Salisbury House make a more moderate contribution to criteria 1 and 4. These areas are bordered by mature trees and buildings which screen open views of the wider MOL. Therefore, their release would not significantly affect the distinction of adjacent MOL. Release in these areas would therefore result in moderate MOL harm.

The playing fields associated with Edmonton County School and the allotments just to the south make a weak contribution to all criteria. Furthermore, treelines to the north and east separate the area from the wider MOL, limiting the impact of release in this location on the distinction of adjacent MOL. However, the area is fundamentally open. Release of this area would therefore result in low MOL harm.

associated sports courts and pitches in the south-east of the MOL. Churchfield Recreation Ground is located in the north eastern area of the MOL. The northern tip of the MOL is dominated by a large community centre and associated parking facilities.

MOL18

15.38ha

Contribution to MOL criteria

Openness

Land is relatively open but has some limited urbanising development within it, in the form of the Britain Alevi Federation Community Centre.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The allotments in the central section of the MOL either side of Salmon's Brook is more isolated from the built-up area than the rest of the MOL. The main road and patchy treeline provide distinction from the built-up area to the north, as do the treelines to the east and south.

The southern section of the MOL, consisting of Edmonton Sports and Social Club and playing fields has more moderate distinction from the built-up area. This is due to the weak boundary features between this area of MOL and the residential development to the south, which allows views of the built-up area and the treeline which separates the playing fields from the wider MOL to the north. However, the longer ranging open views within this portion serve to limit the influence of the built-up area.

Both the very southern tip of the MOL (isolated playing fields associated with Stark's Field Primary School) and the northern section (Churchfield recreation ground) have weaker distinction from the built-up area. Both areas have weak boundary features with the built up area and are cut off from the wider MOL by treelines, limiting views of the open area. The buildings in the northern corner of the MOL compromise the openness of the land on which they sit and that in the immediate vicinity.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a strong contribution to Criterion 1 also make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Salmon Brook Link. Consequently, the areas of the MOL that make a moderate contribution to Criteria 1 also make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Salmon Brook Link. There are however areas within the MOL that make a weak/no contribution to the other three MOL criteria. Consequently, these areas also make a weak/no contribution to this criterion.

MOL18

15.38ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL18

15.38ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The allotments in the central section of the MOL either side of Salmon's Brook makes a strong contribution to criteria 1 and 4. Release in this area would therefore result in high MOL harm.

The southern section of the MOL, consisting of Edmonton Sports and Social Club and playing fields makes a more moderate contribution to criteria 1 and 4. However, the northern edge of this area is comprised of relatively short trees and hedgerows. Release in this area would therefore bring the built-up area much closer to the more distinct MOL to the north, which would reduce the contribution of this area to criteria 1 and 4 from strong to moderate. Release in this area would therefore result in moderate-high MOL harm.

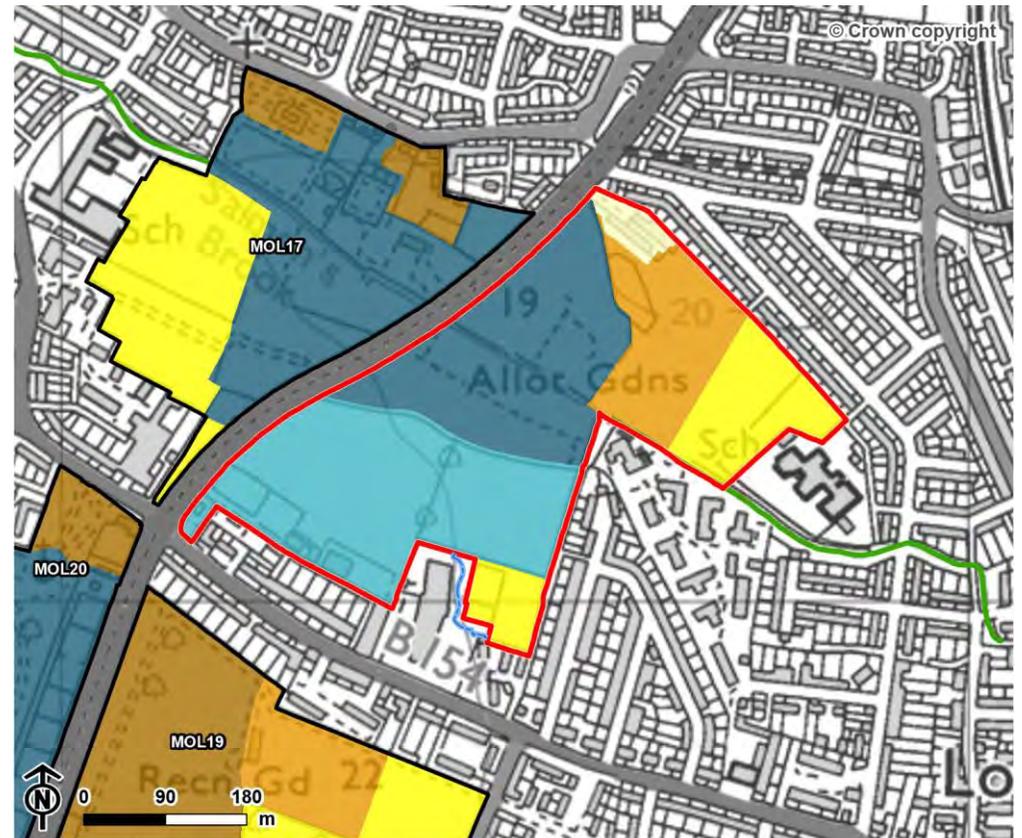

Churchfield recreation ground at the north eastern end of the MOL makes a weak contribution to all the criteria. However, release of the western half of the recreation ground which shares a relatively weak western boundary with the adjacent allotments would reduce the overall contribution of the allotments to criteria 1 and 4 from strong to moderate. Release in this portion of the MOL would therefore result in low-moderate MOL harm.

The isolated playing fields associated with Stark's Field Primary School in the southernmost corner of the MOL make a weak contribution to all the criteria. This area and the eastern half of Churchfield recreation ground, which also makes a weak contribution to all criteria, could be released without impacting the distinction of adjacent MOL. However, the areas are fundamentally open. Release of these areas would therefore result in low MOL harm.

The buildings in the northern corner of the MOL are directly adjacent to the built-up area and are therefore indistinguishable from it. Release of this area would therefore result in no/very low MOL harm.

MOL19

11.83ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The western half of the MOL has moderate distinction from the built-up area. Although the residential gardens to the north and south offer clear views of the built up area the open views of the MOL within this section and to the east serve to limit their influence. Furthermore, the strong treelines to the west and south limit influences of the built-up areas in these directions.

The eastern half of the MOL has weaker distinction from the built-up area. It has no significant boundary features to provide distinction from the built-up area to the north and east and only residential gardens provide any distinction to the south and west. Views of the built-up area are extensive due to this lack of boundaries and the scale of the development at the Latymer School and residential development to the north, off Hydefield Court. A treeline separates the school playing fields from the wider MOL, limiting views of the open area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

MOL19

11.83ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL19

11.83ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

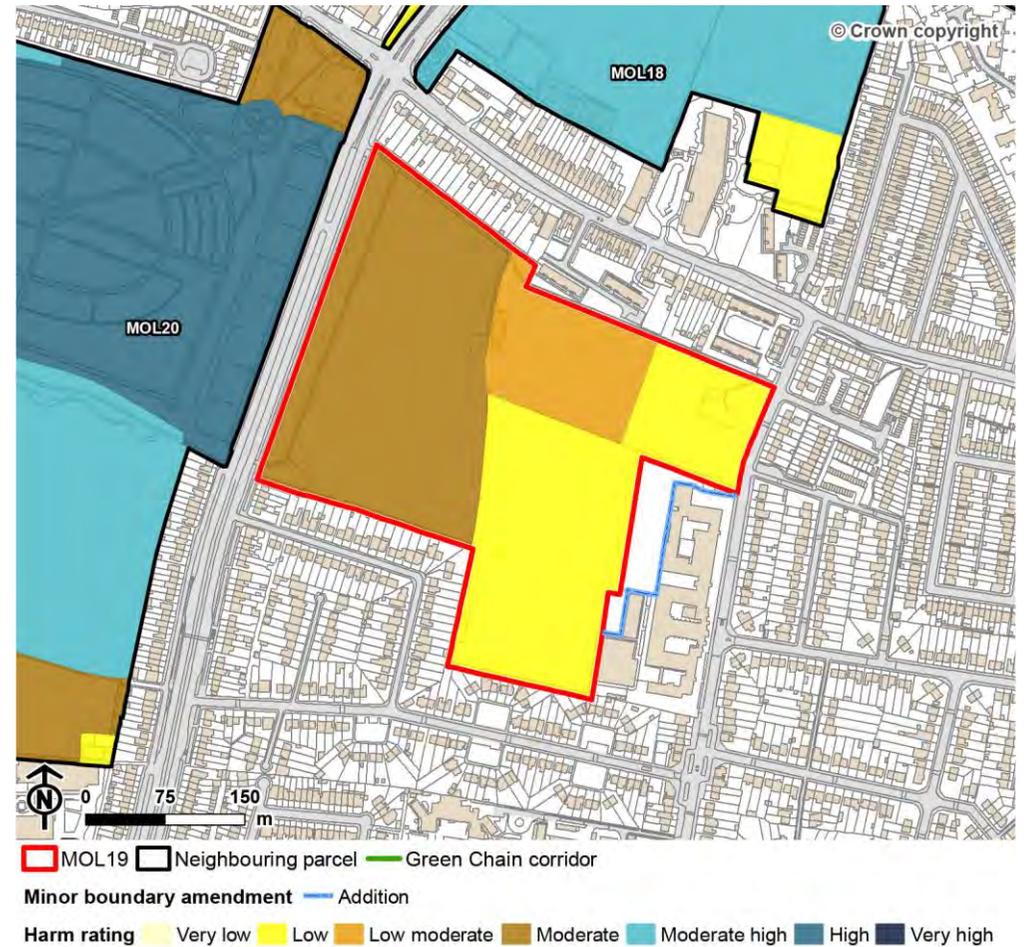

The western half of the MOL makes moderate contribution to criterion 1. The MOL to east of this area has weak distinction from the built-up area so the release of the western area would not impact on its distinction. Release in this area would therefore result in moderate harm.

The eastern half of the MOL makes a weak contribution to all criteria. However, release of the western half of the northern playing field which shares a weak western boundary with the adjacent eastern area would reduce the overall contribution of the eastern area to criterion 1 from moderate to weak. Release in this portion of the MOL would therefore result in low-moderate MOL harm.

The eastern half of the MOL makes a weak contribution to all criteria. Release of the more contained eastern half of the northern field and the well screened playing fields of Latymer School would not affect the distinction of the adjacent MOL to the west. However, the area is fundamentally open. Release of this area would therefore result in low MOL harm.

MOL19

11.83ha

Parcel location

The MOL lies in the south of the Borough in the east of Winchmore Hill. The MOL consists of Firs Farm Wetlands Park and Playing Fields, tennis courts, a skate park, Edmonton Cemetery and Chapel. In the west of the MOL is Clowes Sports Ground.

MOL20

43.94ha

Contribution to MOL criteria

Openness

Land is relatively developed and has a significant amount of urbanising development within it, in the form of a church, a visitor centre for Firs Farm Wetland, a primary school and a building.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is generally open. The residential roads and treeline to the south west at Clowes Sportsground and thick treeline to the north west at Edmonton Cemetery provide reasonably strong distinction from the large built up area and help to screen views of the built-up area. The size of the MOL, and intermittent tree cover, particularly in the cemetery further restricts views and increases distinction. Although Firs Lane separates Clowes Sportsground from the wider MOL to the east, the scale of surrounding development is modest and partially screened by trees, ensuring a sense of distinction is maintained.

The north eastern portion of Firs Farm Wetlands Park and the playing fields to the east, an area of open space along the northern edge of the MOL and the north western corner and very northern tip of Edmonton Cemetery have more moderate distinction from the built-up area. The playing fields in the south eastern corner lack any significant boundary features with the built-up area to the south and east and there are views of the urban edge. However the surrounding development is small in scale and this coupled with the long ranging views of the open playing fields limits their impact. The area of MOL to the west, between Firs Lane and the cemetery also lacks any boundary features with the built-up area and is separated from the wider MOL by treelines. A large building to the north is clearly visible from within this portion of the MOL, however it is set back from the edge of the MOL, and so views of the built-up area do not dominate. Similarly the north western corner of cemetery has weaker boundaries than the remainder, it is a small area separated from the wider MOL by a treeline, which limits views of the open area and allows the residential development which is in close proximity to the north and west to dominate views in the area. The very northern tip of the cemetery is similarly separated from the wider MOL and so views of the open area are limited, though tree cover within this section means some distinction and shielding of views is retained. There are two buildings located in the north eastern corner of the MOL which reduce the openness of the land on which they sit. However their scale and separation from the built-up area and one another limit their impact. There is also a building located just to the east of Firs Lane which also compromises the openness of the land on which it sits. Its scale and the surrounding tree cover limits its wider impact.

The building in the south eastern corner of the MOL associated with Firs Farm school reduces the openness of the land upon which it sits, and its close proximity to the built-up area of the school limits its distinguishability from the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or

MOL20

43.94ha

metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Weak/No contribution

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

Weak/No contribution

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL20

43.94ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The majority of Edmonton Cemetery, Winchmore School playing fields, Clowes Sports Ground and the western portion of Firs Farm Wetlands make a strong contribution to criteria 1. Release in these areas would therefore result in high MOL harm.

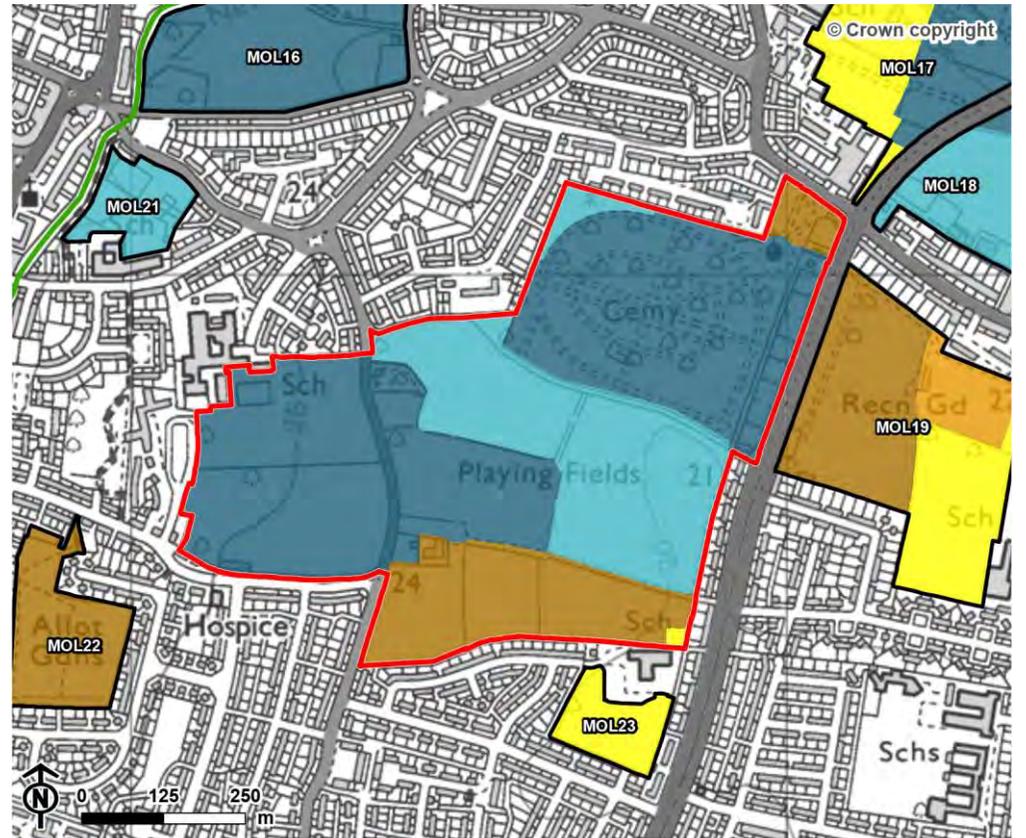

The north eastern portion of Firs Farm Wetlands Park and the playing fields to the east make a moderate contribution to criteria 1. Release of the northernmost portion of these areas containing some of the waterbodies would bring the built-up area much closer to MOL immediately to the south – south of the water bodies. This area, screened from the wider MOL by the line of mature trees to the south would then have reduced distinction from the built-up area reducing its contribution to criteria 1 from moderate to weak. This area would be influenced in the same way if the playing fields immediately to the east were also released in isolation. The release of all three of these areas in combination would split the MOL in two. The north western corner of Edmonton Cemetery also makes a moderate contribution to criteria 1. Although the thick treeline to the south largely screen views of the wider MOL, release in this area would breach the regular boundary of the cemetery resulting in some impact on the distinction of adjacent MOL to the south and east. Release in these parts of the MOL would therefore result in moderate-high MOL harm.

The very northern tip of Edmonton Cemetery and the southern portion of the Firs Farm playing fields in the south eastern corner of the MOL also make a moderate contribution to criteria 1. With the exception of the eastern half of the southern portion of the Firs Farm playing fields, these areas are bound by mature trees screening them from view of the wider MOL. The eastern half of the southern portion of the Firs Farm playing fields has no clear boundary with the MOL to the north; however, the area to the north is large and expansive and has clear views of the built up area along Kipling Terrace to the east. Their release would therefore not impact the distinction of adjacent MOL. Small portions of these areas contain buildings that reduce the openness of the land on which they sit; however, their scale and separation from the built-up area and one another limit their impact. Release in these parts of the MOL would therefore result in moderate MOL harm.

The building in the south eastern corner of the MOL associated with Firs Farm school makes a weak contribution to all criteria and its close proximity to the built-up area of the school limits its distinguishability from the built-up area. The loss of openness in this location reduces the harm of release on the site of the building to low.

MOL21

1.83ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. Despite having relatively strong boundaries marked by a road to the north and river to the west, there are no significant boundary features with the built-up area to the south and east. This allows views of the urban edge. Highfield Primary School dominates the southern edge of the MOL and the scale of this relative to the size of the MOL and the lack of any boundary features here partially weakens the influence of the MOL's openness on its distinction from the built up area.

Moderate

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Weak/No contribution

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The western boundary of the MOL follows a section of the New River designated as a Metropolitan SINC. The green spaces within the MOL have the potential to be of value to the species using the SINC and are therefore recognised as making a moderate contribution to this criterion. The MOL containing buildings and hardstanding associated with the school do not currently contribute; however, as areas of fundamentally open land they could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Moderate

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the New River and Enfield Link. Consequently, as the area makes a moderate contribution to Criteria 1 and 3 it also makes a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Moderate

MOL21

Contribution to MOL criteria

Openness

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL lacks any significant boundary features to create distinction from the built-up area, with boundaries just consisting of residential gardens. There are significant views of the built-up area on all sides, and the relatively irregular shape of the MOL results in the built-up area being relatively close in any part.

Weak/No contribution

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Weak/No contribution

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The western boundary of the MOL follows a section of the New River designated as a Metropolitan SINC. The allotments within the MOL have the potential to be of value to the species using the SINC. Therefore, the MOL is recognised as making a moderate contribution to this criterion.

Moderate

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the New River and Enfield Link. Consequently, as the area of the MOL makes a moderate contribution to Criterion 3 it also make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

In the south-west of the MOL there are tennis courts and a playground.

MOL24

18.35ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The regular boundaries of the MOL lined with mature trees and liner bands of open woodland offer only partial views of the built-up area around the majority of the MOL offering strong distinction from the built-up area and screen the open space in the centre of the Park from the built up area, maintaining a strong sense of openness and distinction.

The open and unwooded MOL in between the built-up area and woodland at the north western and eastern ends of the Park, where the adjacent residential properties are generally larger have slightly more of a relationship with the built-up area. The woodland serves to screen the wider MOL from view in these locations, increasing the influence of the built-up area where gaps along the tree-lined edges of adjacent residential gardens offer intermittent views of the urban edge. These portions of the park are therefore considered to have moderate distinction from the built-up area.

The tennis courts off Brookdale Road at the southern edge of the MOL are less well screened from the built-up area to the south and south east. Furthermore, this area particularly separated from the wider MOL to the east by the raised railway line. This area is therefore considered to have weak distinction from the built-up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is not considered to be functionally linked to any designations of national or metropolitan significance and is therefore considered to make a weak/no contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the Pymmes Brook Link. Consequently, the areas of the MOL that make a strong contribution to Criterion 1 also make a strong contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

The MOL is connected to the Pymmes Brook Link. Consequently, the areas of the MOL that make a moderate contribution to Criterion 1 also make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL24

18.35ha

The MOL is connected to the Pymmes Brook Link. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Weak/No contribution

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no
Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL has a connection to a known strategic corridor and therefore makes a contribution to criterion 4. Contributions to criterion 4 across the MOL correspond to highest contribution for criteria 1, 2 and 3.

MOL24

18.35ha

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

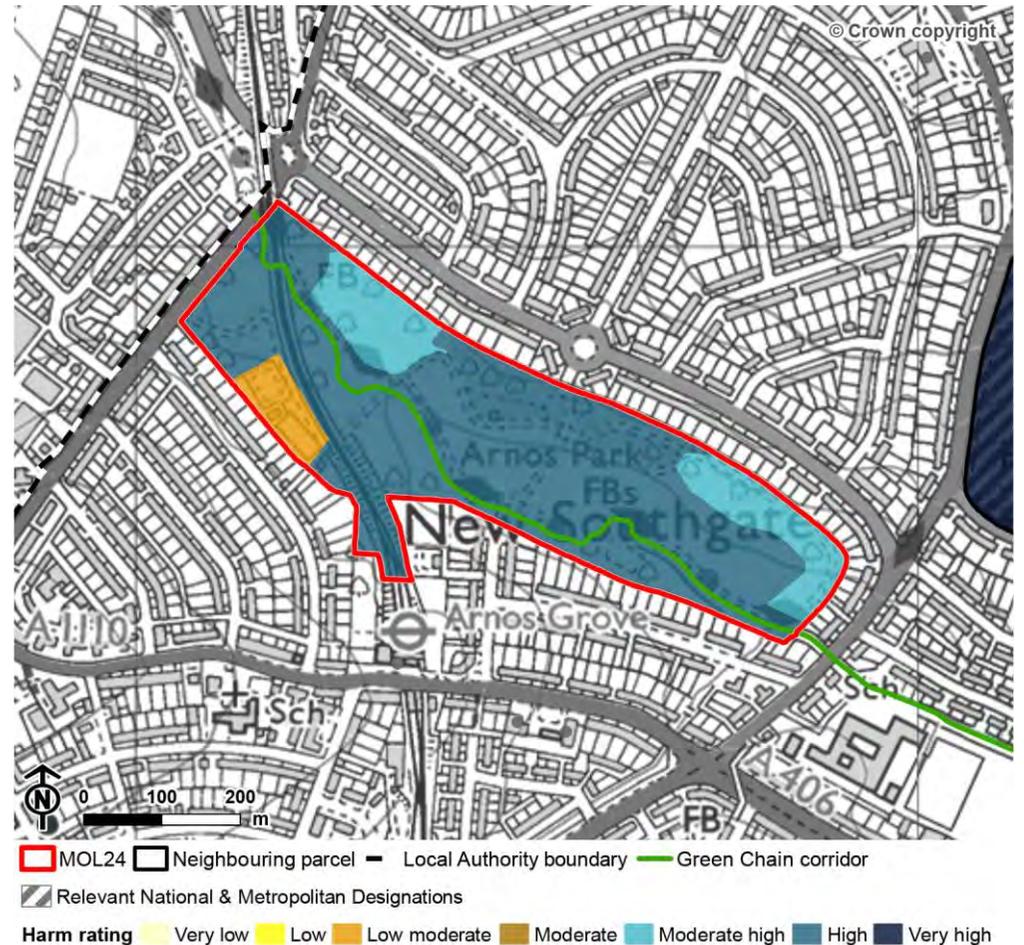

The vast majority of the MOL makes a strong contribution to criteria 1 and 4. The regular boundaries of the MOL marked by treelines and residential gardens provide distinction. Release of all but a few more screened locations in the MOL would therefore result in high MOL harm.

The open and unwooded MOL in between the built-up area and woodland at the north western and eastern ends of the Park make a moderate contribution to criteria 1 and 4. Woodland screens the wider MOL from view in these locations, but release in these locations would breach the regular boundary around the edge to the MOL resulting in some impact on the distinction of adjacent MOL. Release in these areas of the MOL would therefore result in moderate-high harm.

The tennis courts off Brookdale Road at the southern edge of the MOL make a weak contribution to criteria 1 and 4. The raised railway line screens the wider MOL from view, but release of the tennis courts would breach the regular southern boundary, resulting in some impact on the distinction of adjacent MOL to the north west. However, it is acknowledged that the mature trees in this direction would screen the visual impact of this. Release in the tennis courts would therefore result in low-moderate harm.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. It has strong boundaries formed by roads and treelines in all directions, providing strong distinction from the built-up area. The lakes and woodland in the centre of the MOL provide further distinction for this area. Views of the built-up area in the western half of the MOL are limited by the boundary features and the open views of the wider MOL. Boundary features limit views of the built-up area in the eastern half, but treelines within the MOL also limit wider views of the open land in this half.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The MOL is designated as a Grade II Registered Park and Garden and contains three listed buildings, including the Grade II* listed Broomfield House. The Lakes Estate Conservation Area follows the northern and eastern boundaries of the MOL. Therefore the MOL is considered to make a strong contribution to this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is not connected or within close proximity to a recognised strategic corridor, node or link in the Borough's green infrastructure network and therefore makes a weak contribution to this criterion.

5.04ha

Contribution to MOL criteria

Openness

Land is open.

Summary of contribution to each MOL criterion

Different parts of each area of MOL can contribute differently to each MOL criterion. Multiple contribution ratings per criterion describe the variations in contribution across the MOL.

Criterion 1 - Contribution to the physical structure of London by being clearly distinguishable from the built up area

The MOL is open. The southern half of the MOL has some boundary features which create distinction from the built-up area, particularly to the west where the boundary is formed by the New River and a treeline. The eastern boundary is weaker, formed only by residential gardens. While this allows some views of the built-up area, the development is small scale and this portion of MOL has open views of the wider cricket pitch.

The irregular northern section of the MOL has weaker distinction from the built-up area. A treeline and building separates this section from the wider MOL to the south, limiting views of open land. Furthermore, this section of MOL generally lacks strong boundary features to the east and west revealing clear views of the built up area.

Criterion 2 - Presence of open-air facilities which serve either the whole of or a significant part of London

The MOL is less than 60ha in area and so is not considered to be large enough to be of metropolitan significance. Therefore the MOL is considered to perform weakly against the criterion.

Criterion 3 - Presence of features or landscapes of national or metropolitan value

The western boundary of the MOL follows a section of the New River designated as a Metropolitan SINC. The green spaces within the MOL have the potential to be of value to the species using the SINC and are therefore recognised as making a moderate contribution to

this criterion. The MOL containing buildings and hardstanding associated with car parks and outdoor sports do not currently contribute; however, as areas of fundamentally open land they could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

Criterion 4 - Forms part of a network of green infrastructure and meets one of the above criteria

The MOL is connected to the New River and Enfield Link. Consequently, the areas of the MOL that make a moderate contribution to Criteria 1 and/or 3 also make a moderate contribution to this criterion. The areas of the MOL that are not green but are fundamentally open land could reasonably be returned to green space with green infrastructure value and have therefore not been downgraded against this criterion.

MOL26

5.04ha

Contribution to Criterion 1 ■ Strong ■ Moderate ■ Weak/no

Contribution to Criterion 3 ▨ Strong ▨ Moderate ▨ Weak/no

The MOL is not considered to serve the whole or a significant part of London, and therefore makes a weak contribution to criterion 2.

This MOL does not have a connection to a known strategic corridor and therefore does not make a contribution to criterion 4.

MOL26

5.04ha

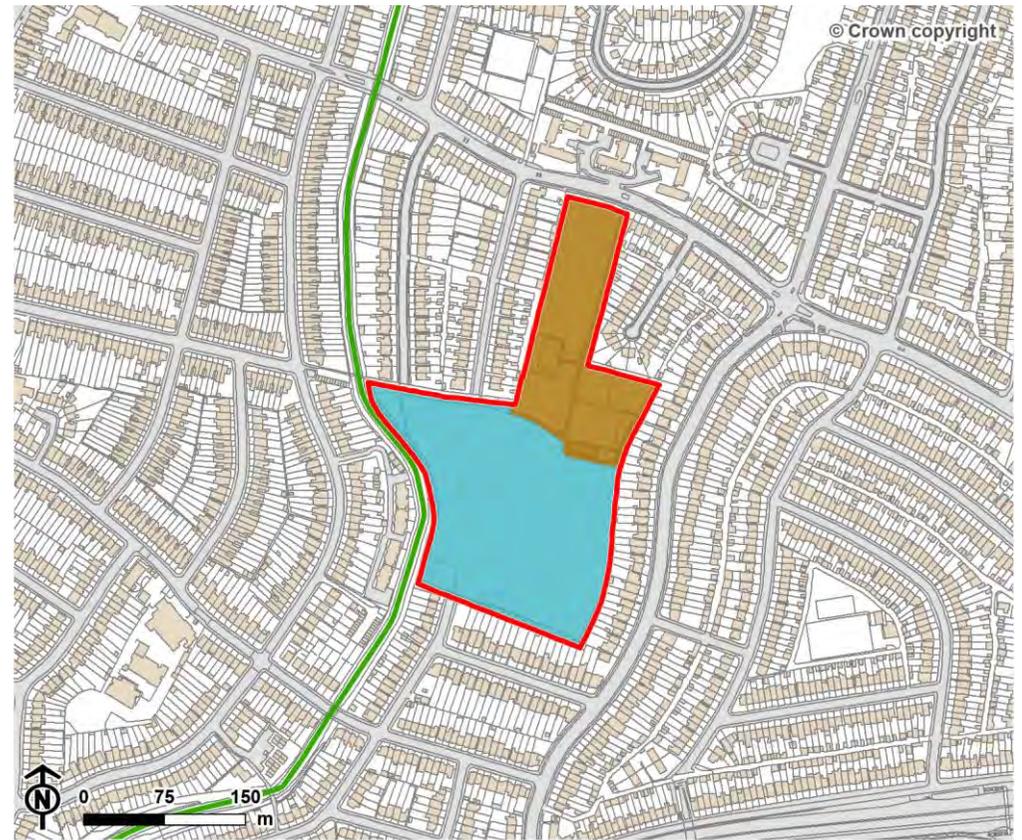

Harm of release

Multiple harm ratings are provided where releasing more discrete pockets of MOL would result in lower harm.

The southern regular part of the MOL adjacent to the New River makes a moderate contribution to criteria 1, 3 and 4. The irregular area of MOL to the north has weaker distinction from the built-up area, so release of the southern part would not have a significant impact on the distinction of adjacent MOL. Release in the southern part would therefore result in moderate-high harm.

The irregular northern part of the MOL makes a moderate contribution to criteria 3 and 4. The release of the irregular northern part of the MOL including the surfaced playing fields would not affect the distinction of the MOL to the south which is largely screened by mature trees. Release in the northern part would therefore result in moderate harm.
